Instruction

- Analysis of CCA Method -

Dec. 31, 2017

IISEE, BRI, Japan

By T.Yokoi

Note: This version was developed on Linux: Ubuntu 16.04 LTS on VMWare Workstation Player 12.1.1 (build-3770994) on Windows10 Home 64bit (Build 14393) for 64bit PC, using gfortran compiler.

Operation on other OS may require additional revision or modification by users themselves.

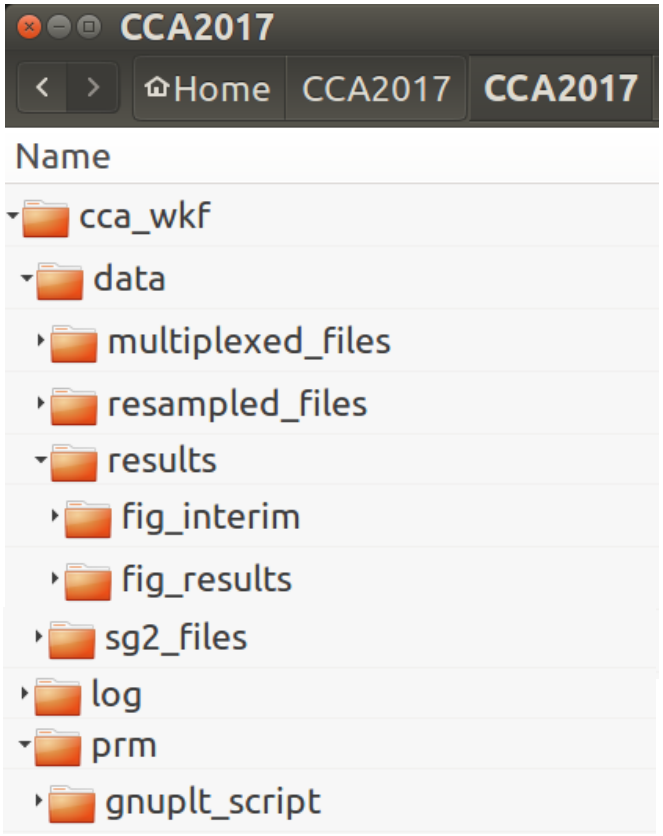
Execution of commands is conducted as

./*executable_file_name*.exe
or
sh *shell_script_file_name*.sh

If it is necessary to leave log file of execution

./*executable_file_name*.exe 2>&1 | tee ./spacwkf/log/*log_file_name*.log
or
sh *shell_script_file_name*.sh 2>&1 | tee ./spacwkf/data/log/*log_file_name*.log

Folder Structure



Every necessary programs and files are stored under the folder “CCA2017”. The command operation must be conducted in the same folder.

The source codes of the programs are stored in the subfolder “source”, whereas the subfolder “doc” includes document files including this instruction manual.

The subfolder of work space “cca_wkf” contains the subfolder “prm” for parameter files and the script files of GNUPLOT, the subfolder “data” for data files including graphic ones and the subfolder “log” for log files of execution are stored.

Note: GNUPLOT scripts files

The folder “CCA2017” includes the following files of GNUPLOT scripts.

vel_model.plt
results.plt
etc.

and others under the subfolder ./cca_wkf/prm/gnuplt_scripts.

These can be loaded on GNUPLOT as load ‘ ???? ’.
Some programs create the scripts of GNUPLOT in that the command

‘set terminal x11’ ,

Is included. This works on the GNUPLOT on Ubuntu and may be that on Windows.

If any problem on Windows, it is worth to try to replace it with

‘set terminal wxt’ .

Note: Executable files

The folder “CCA2017” includes several executable files. Their source code files are stored in the subfolder ./source. Then, the following command is required to re-compile them if necessary. In the folder CCA2017, type in the following command.

gfortran ./source/???.for –o ???.exe

In case of problems caused by the incompatibility between Fortran77 and Fortran95,

gfortran -ff2c ./source/???.for –o ???.exe

Executable files must be stored in the folder CCA2017. This means that it is not necessary to move the executable files.

Note: Shell script files

The folder “CCA2017” includes several shell script files.
They are composed of few executing commands to reduce the typing tasks in data processing.
The following command can execute the shell script files.

sh *shell_script_file_name*.sh
or
sh ./*shell_script_file_name*.sh

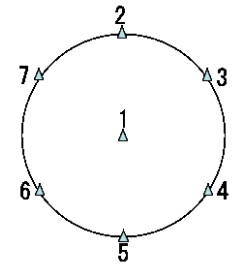
As the contents of the shell script files contained in this program package are simple, they can work as batch files. However, it is necessary to activate batch files using the following.

chmod u+x *shell_script_file_name*.sh

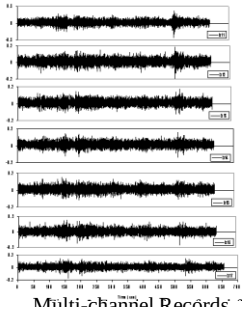
For execution as a batch file,
./*shell_script_file_name*.sh

Procedures of analysis

Field Work

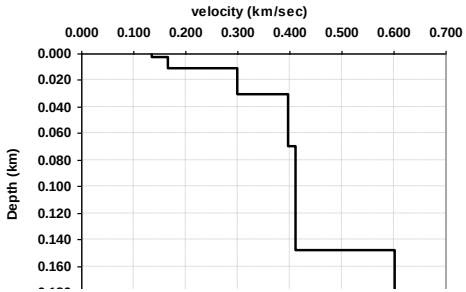


Microtremor Array Measurement
(Vertical Component)



1. Multi-plexing & Resampling

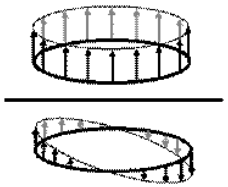
Estimation of Shear Wave Velocity Structure

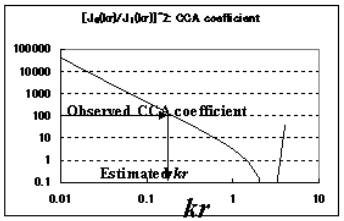


4. Heuristic Search of V_s Structure

Inversion or
Heuristic Search

Calculation of SPAC Coefficient

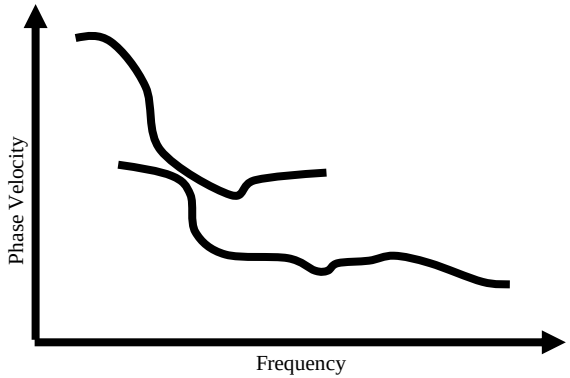




2. Calculation of CCA coefficient

Least Square Fitting to $J_0(kr)$

Calculation of the phase velocity



3. Determination of Dispersion Curve

Data Processing

1. Multiplexing & Resampling
    - 1.1 Format Conversion & Multiplexing
        - 1.1.1 *seg2* standard format
        - 1.1.2 *win* format for LS8800
    - 1.2 Resampling & Screening
        - “sh ./resamplec.sh”
    - 1.3 Plot Waveform:
        - “sh ./seewavc.sh”
    - 1.4 Checking the selected time blocks
        - “sh ./seeblkc.sh”
2. Estimating Dispersion Curve
    - 2.1 Calculation of CCA coefficient
        - “sh ./pwrcrs3.sh”
    - 2.2 Plot Power, Fourier Spectra & Coherence
        - “sh ./spectra_all.sh”
    - 2.3 Quality Control & Dispersion Curve
        - “sh ./results.sh”
3. Heuristic Search of Vs Structure
4. Re-arrange graphs *(in preparation)*

Note: Example1

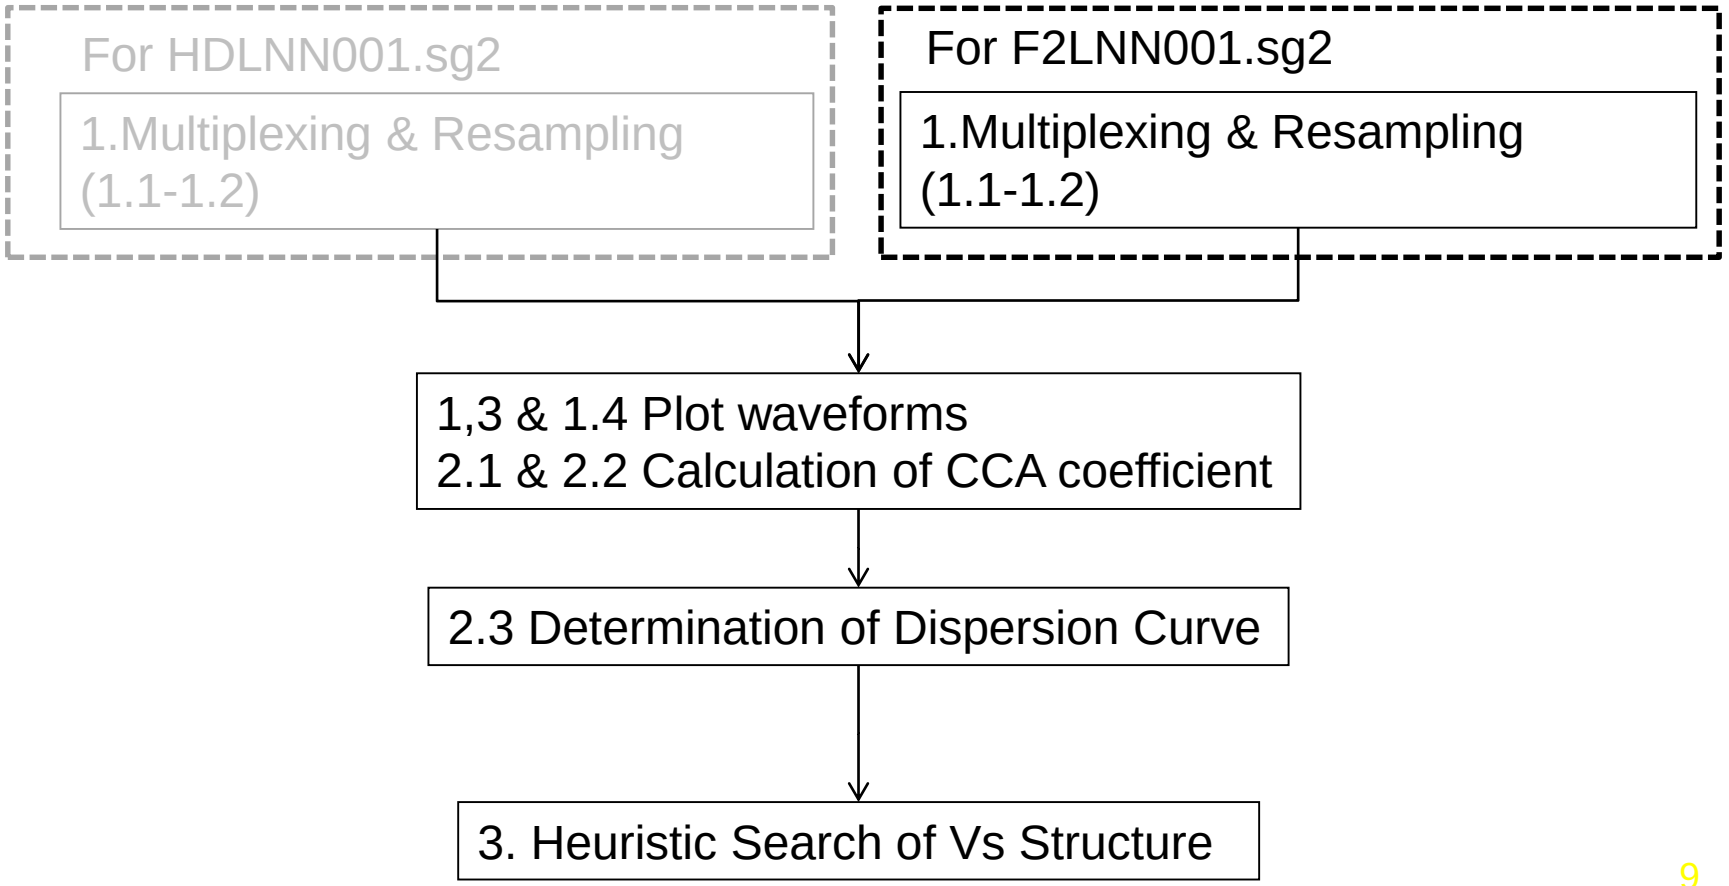
(Instrumental Correction without sensor at the center)

Example with two data sets:

HDLNN001.sg2: Huddle test data file

F2LNN001.sg2: 6 points circular array without one at the center

Both are the seg2 standard format file.



1. Multiplexing & Resampling

1.1 Format conversion & Multiplexing

1.1.1 *seg2* standard format)

Shell Script used:

sh ./seg2read.sh

Program and parameter file used:

seg2read.exe +./cca_wkf/prm/seg2read.prm

seg2read.exe is prepared for the field data files of seg2 standard format.

Terminology

Multiplexing:

To sort the data individually stored in single channel files into a multi-channel file of the time-sequential format.

Multiplexing must be done by the users prior to the analysis. Here, *seg2* standard (multiplexed binary) format is explained as an example.

The multiplexed files prepared by users must be written in the same format as that of the output files of “seg2read.exe” explained below. Their extension is “.dat” .

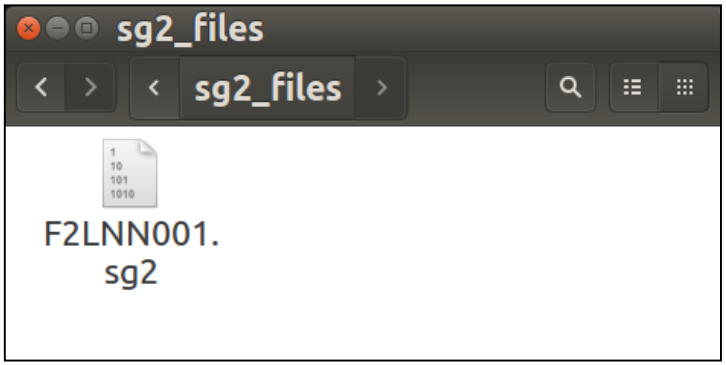
seg2read.exe

+ Convert data format from seg2 standard format (binary & multi-channel) in the sub-folder "cca_wkf/data/sg2_files" to cdm format (ascii text, multi-channel),

+ Channel pivoting and extraction

First: Copy all the seg2 format files to be converted into the sub-folder "cca_wkf/data/sg2_files".

Example:



```
seg2read.sh:

#! /bin/sh -x
cd cca_wkf/data/sg2_files
ls *.sg2 > sg2file.lst
cd ../../..
./seg2read.exe | tee cca_wkf/log/seg2read.log
cd cca_wkf/data/multiplexed_files
ls *.dat > mltfile.lst
cd ../../..
./mk_title.exe
```

Shell script executes "ls *.sg2 > sg2file.lst" in this sub-folder and existing sg2 files are listed in the newly created file "sg2file.lst".
All the files listed in it that have the extention specified in the 3rd line of the parameter file “seg2read.prm”.

Finally, the first line of “seg2read.prm” is copied to “graph_title.txt” in the same subfolder.

Example: seg2read.prm

All the files listed in "sg2file.lst" that have the extension specified in the 3rd line are converted to the output files that have the extension given in the 4th line.
Edit the file "sg2file.lst" using “gedit” or other text edior if necessary.

seg2read.prm

```
LCCM,Field,r=2m,L22D,No_Rs,No_A_amp,D_amp=X1,F2LNN0,Mar.15,2012      :comm(a70)
5.E-3    : scaling factor (for output files in mkine(1.e-3cm/s))
sg2      : extension of input seg2 format files(a3)
dat      : extension of output ascii text files(a3)
0 3 0.1 1.0 1.5  :nfilter(=1:apply),nchara=3:bandpass),fl,fh,fs
pvlist 1 2 3 4 5 6  : Channel Pivoting
```

The array used in the field has 6 sensors, but none of them at the center. They were installed counter-clockwise order. Then, pvlist 1 2 3 4 5 6 :

Explanation: seg2read.prm

All the files listed in "sg2file.lst" that have the extension specified in the 3rd line are converted to the output files that have the extension given in the 4th line.
Edit the file "sg2file.lst" using “gedit” or other text edior if necessary.

seg2read.prm

1st line : comment (a70)
2nd line : scaling factor (use the value that makes the unit of the output files "mkine" (1.e-3 cm/s))
3rd line : extension of input seg2 format files(a3)
4th line : extension of output ascii text files(a3)➔Fix it “.dat”
5th line : nfilter(=0:pass, =1:apply, =2:DC & Trend removal), ncharacter(=2:lowpass,=3:bandpass),fl,fh,fs
6th line : Channel Pivoting
'normal' : no pivoting, all channel used
'rev_al' : all channel used but in reversed order
'rev_fh' : all channel used but former half in reversed order
'rev_lh' : all channel used but latter half in reversed order
'pvlist' 2 1 3 4 6 23 24 : Pivoting list.

Examples of the 6th line of seg2read.prm

```
Use all channels without pivoting:
        normal    : Channel Pivoting
Use all channels but reversed order:
       reverse   : Channel Pivoting
Use the first 7 channels of the input files without changing order:
        pvlist 1 2 3 4 5 6 7 : Channel Pivoting
The same as above but 7th channel moved to the first:
        pvlist 7 1 2 3 4 5 6 : Channel Pivoting
Use only odd numbered channels among 24 without changing order:
        pvlist 1 3 5 7 9 11 13 15 17 19 21 23 : Channel Pivoting
```

Note: Be sure to put ‘ ‘(blank) before ‘:’(colon), otherwise the program can have an error in detecting the end of line.

If a sensor is located at the center of the circler array and used for incoherent noise correction, the corresponding data must be assigned to ch-1. Then, other channels must be listed following the order counter clock wise. The value of the azimuth of the first peripheral sensor must be given to the parameter ph00 and the in-coming azimuth of the pre-dominant wave is calculated.
“pvlist” can be used to change the channel order.

Format of output files in ./cca_wkf/data/multiplexed _files:

Users who use single channel recorders or data loggers must multiplex the record files in the following format by themselves.

```
 6  0.0080      0.1000E+01  225000  mkine
LCCM,Field,r=2m,L22D,No_Rs,No_A_amp,D_amp=X1,F2LNN
    0.000000  0.9600000E+02  0.6900000E+02  0.1220000E+03 …
    0.008000  0.1800000E+02  0.4200000E+02 -0.1450000E+03 …
    0.016000  0.1100000E+03  0.2070000E+03 -0.1930000E+03 …
    0.024000  0.5500000E+02  0.1370000E+03 -0.1850000E+03 …
    …
```

1st line: Number of channels, Δt(sec), scale, number of samples,unit
2nd line: Comment (less than 50 characters)
3rd line: Time, 1st-ch sample, 2nd-ch sample, 3rd-ch sample, ….

In the next step (resamplec.for reads this file as follows)

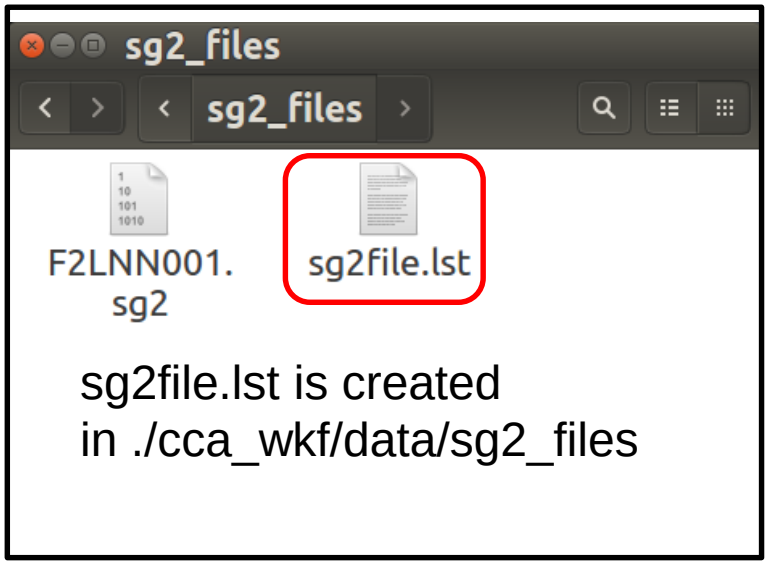
```
read(1,*)nch00,dt00,scale00,ndata00,cunit
…
read(1,'(a50)')comment
…
read(1,*,end=10) xdum,(x(i,j),j=1,nch)
```

Warning!

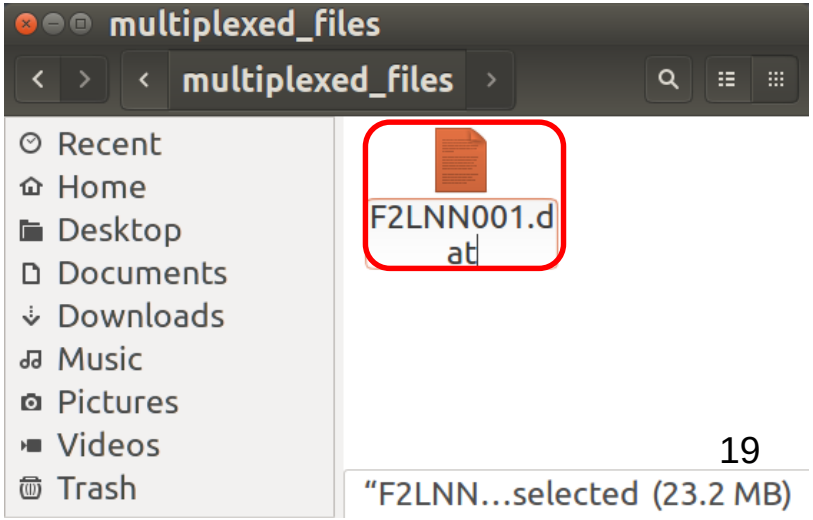
seg2read.for can handle less than or equal to 25 channels and less than or equal to 500,000 samples in every channel.
Exceedance may result in a significant error.
It is recommendable to split the input data file if too long, for example, into several files of 1 hour or 30 minutes data.

```
yokoi@ubuntu: ~/CCA2017/CCA2017
yokoi@ubuntu:~/CCA2017/CCA2017$ sh ./seg2read.sh
./cca_wkf/prm/seg2read.prm
./cca_wkf/data/sg2_files/sg2file.lst
 F2LNN001.sg2

./cca_wkf/data/sg2_files/F2LNN001.sg2
./cca_wkf/data/multiplexed_files/F2LNN001.cdm
nch= 12 dt= 0.008 nn=  225000
     1 files have been converted.
Normal End.
yokoi@ubuntu:~/CCA2017/CCA2017$
```



Input file is ./cca_wkf/data/sg2_files/F2LNN001.sg2
Multiplexed output is ./cca_wkf/data/multiplexed_files/F2LNN001.dat
Log file is stored in 'cca_wkf/log/seg2read.log'



1. Multiplexing & Resampling

1.1 Format conversion & Multiplexing

1.1.2 *win* format for LS8800

This is the example of individually recorded data using a tri-axial sensor at each observation point.

Format conversion & Multiplexing must be done by the users prior to the analysis for the case of individual recording at each site.

Here *win* format is explained as an example. The *win* format data files are created, e.g., LS8800 of Hakusan Kogyo.

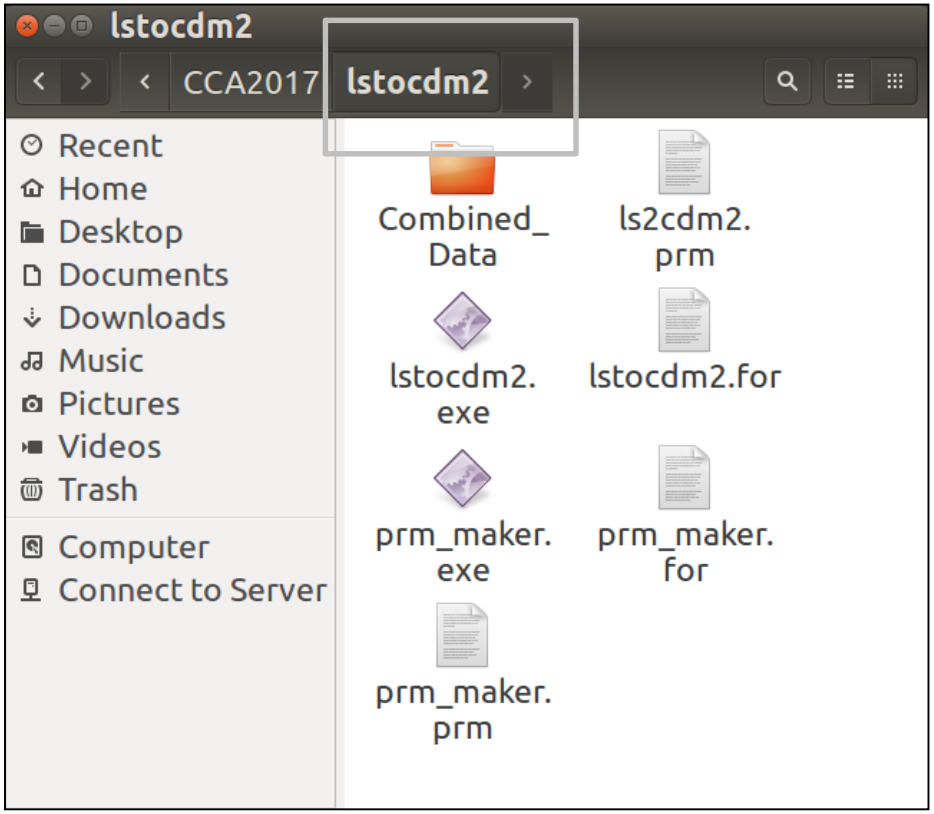
The multiplexed files must be written in a format that is readable in the next step: resampling.

As it is impossible to cover all existing formats in the world, it is strongly recommended to make their own program for format conversion.

Format conversion is conducted in the folder “lstocdm2”.

This folder can be set in any other folder. In this example, it is set in the folder “CCA2017”.

Usage of less than 4 seismographs in a site is assumed.



Preparation:

1) Edit the parameters in prm_maker.for and compile it.

prm_maker.for

```
      parameter(np0=4,nch0=3)
      real      sen(np0,nch0)
      character c_p(np0)*3,c_s*9,ch(nch0)*1,ch1(nch0)*3,
     *          c_piv(nch0)*8,csen(np0)*31,clabel*7,
     *          cstart*11
c constants:
      data alsb/0.15646E-6/
     *     (c_p(i),i=1,4)/'no1','no2','no3','no4'/
     *     ((sen(i,j),j=1,3),i=1,4)
     *                    /794.,792.,798.,
     *                     798.,798.,796.,
     *                     796.,794.,798.,
     *                     796.,796.,796./
     *     (csen(i),i=1,4)
     *         /': #1 T44002 Sensitivity (V/M/s)',
     *          ': #2 T44003 Sensitivity (V/M/s)',
     *          ': #3 T44004 Sensitivity (V/M/s)',
     *          ': #4 T44005 Sensitivity (V/M/s)'/
     *     clabel/'NS EW V'/
     *     (ch(j),j=1,3) /'N','E','V'/
     *     (ch1(j),j=1,3)/'NS','EW',' V'/
     *     (c_piv(j),j=1,3)/' 1 2 3 1',' 2 3 1 1',' 3 1 2 1'/
c input:
      open(10,file='prm_maker.prm',status='old')
```

Sensitivity of each channel & each recorder

Name of each recorder & configuration to the observation points

Assumed components configuration

$ gfortran prm_maker.for –o prm_maker.exe

Preparation (cont.):

2) Edit the parameter file “prm_maker.prm”

```
Sitename_    : site name (a9)
 3  3        : numbers of obs_ponts and channels
 10          : duration of each connected file in min.(integer)
17091511.45  : first file name (yymmddhh.mm)
 20          : number of output connected files (integer)
```

3) Create new folders “*sitename*_no1”, “*sitename*_no2”, “*sitename*_no3” *etc.* in “lstocdm2” .

$ mkdir sitename_no1

4) Copy the data files of LS8800 into the created new folders:
“*sitename*_no1”🡐 files from seismograph No.1
“*sitename*_no2”🡐 files from seismograph No.2
“*sitename*_no3”🡐 files from seismograph No.3
etc.

Execution:

1) ./prm_maker.exe

➔ “lstocdm2.prm” is created.

2) ./lstocdm2.exe

➔ All converted and separated files are stored in “Combined_Data”.

```
yokoi@ubuntu: ~/CCA2017/CCA2017/lstocdm2

yokoi@ubuntu:~/CCA2017/CCA2017/lstocdm2$ ./lstocdm2.exe
 Parameter file: ./lstocdm2.prm

 Directory of input data files:CityHall_no1
 Sensitivity(M/s):    794.000000       792.000000       798.000000

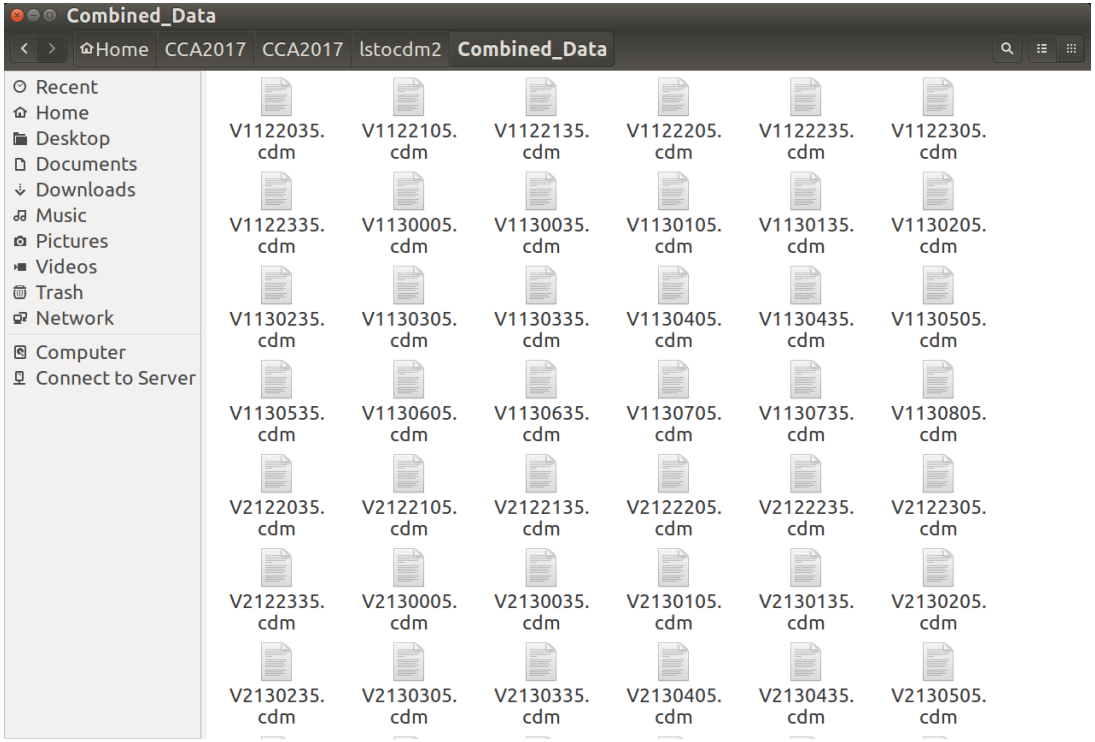
All zero for 0.5byte data 15 12 29 45 ch- 0       0.0
```

This error message means the clipping of data. Check the time and eliminate the corresponding part.

➔ All converted and separated files are stored in “Combined_Data”.



File name (V1122035.cdm) includes the following information:

1st letter: component

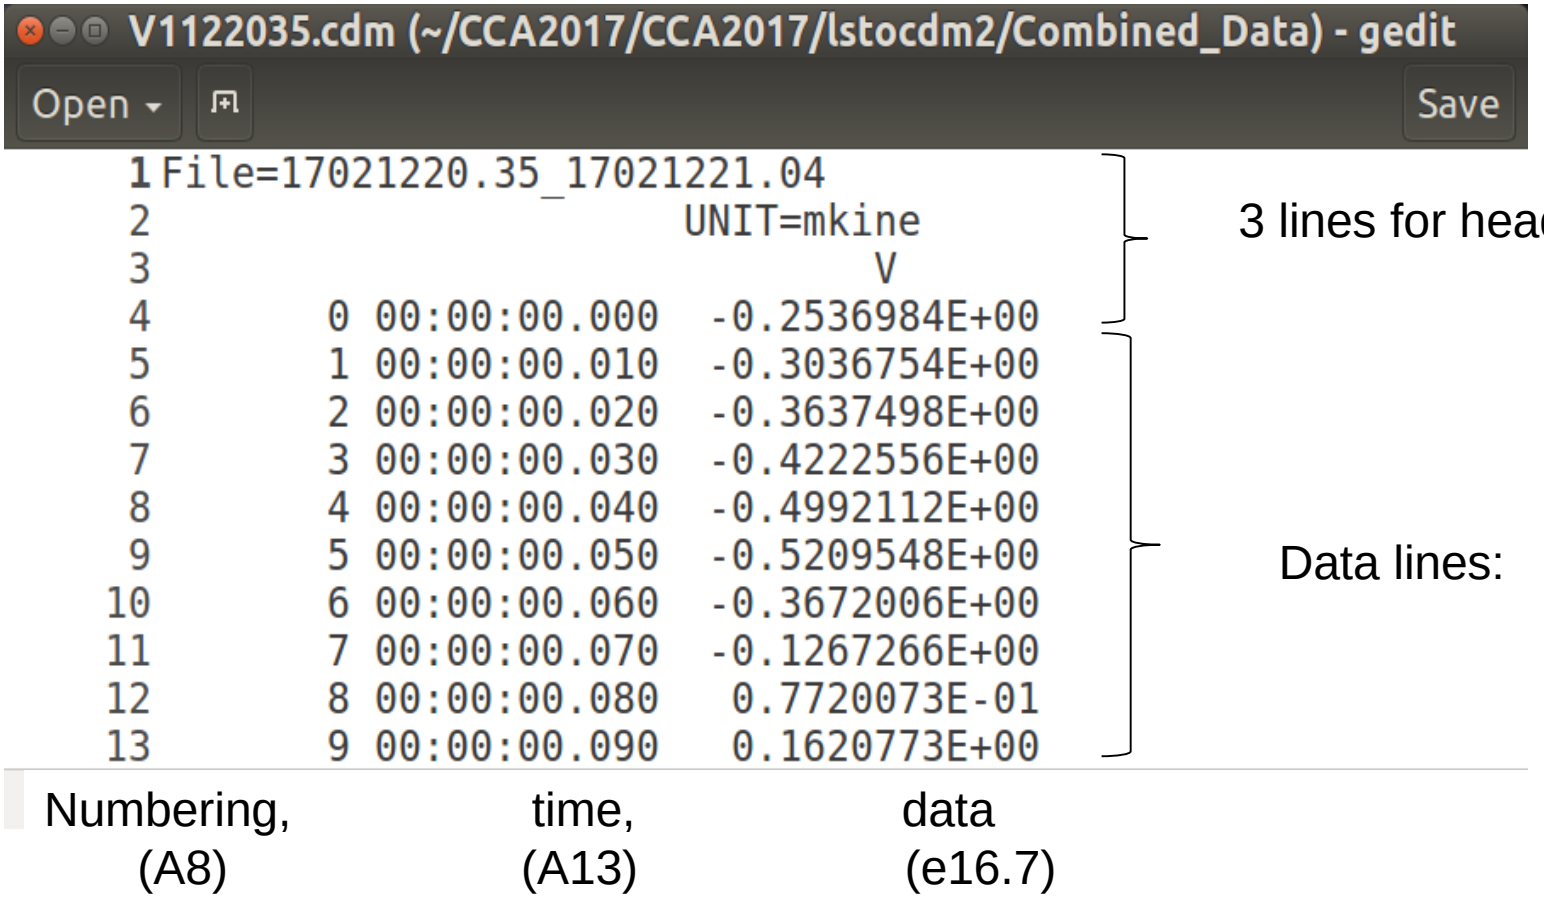
2nd letter: numbering of seismograph (=numbering of station)

3rd & 4th: Date in (i2)

5th & 6th: hour in (i2)

7th & 8th; minutes in (i2)

Example of a converted file



The created single channel file by this format conversion program will be read in the next step using “multipx6.exe” as follows.

“multipx6.for”

```
     character cline(3)*80,cdum*13,cdummy*8  ! Declare three
                                              ! character strings
……..
      do i=1,3
        read(1,'(a80)')cline(i)   ! Read 3 lines header
      enddo
      do i=1,nst0-1
       read(1,*)cdummy            ! Skip first nst0 sec data
      enddo
      do i=1,ndur0
c read input data
        read(1,*,end=10)cdummy,cdum,xdum
        x(i,j)=xdum/scale
       enddo
   10  ndur0=i-1                   ! Adjust number of samples
……..
```

Character strings cline(3) are not used further. Neither cdummy nor cdum.

Procedure for Multiplexing

1) Copy all the data files that will be used in the next step to "./cca_wkf/data/cdm_files" . For CCA analysis, only the files of vertical component are used. Then, copy all files of which name starts from "V".
2) Apply multipx6.exe after editing "multipx6.prm" .
3) For automatic editing of "multipx6.prm", the program "multi_pre.for" is prepared.
   Edit the following "multi_pre.prm" and run "./multi_pre.exe".

```
UD comp, Tsukuba CityHall 2017.09.15 11:45-03H20M : comment(A50)
30          : duration of each connected file in min.(integer)
V1122035    : first file name (yymmddhh.mm)

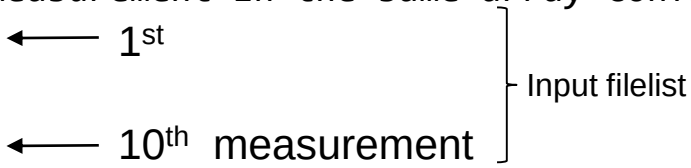
10 8                        :number of measurement in the same array configuration,n_charac
V1151145 V2151145 V3151145
….
V1151445 V2151445 V3151445
```

1ch 2ch 3ch



Input file names : V1151145.cdm

consist of the character string ‘V1151145’ of 8 characters plus another character string ‘.cdm’ of 4 characters. These character strings and their number of characters are indicated in the 7th line for the latter and the 11th line and below for the former. Program ‘multipx6.exe’ automatically combines them and read the data from the files.

Don’t leave a blank line at the end of input file list

multipx6.prm

Output file name: CH01.dat for the 1st measurement. ’01’ shows the numbering of measurement.

…

CH10.dat for the 10th measurement. ’10’ shows the numbering of measurement.

These output file names consist of the character string ‘CH’ of 2 characters as indicated in the 8th line. The following two integers show the numbering of measurement. ‘.dat’ is attached to all automatically.

The data from tst to tst+tdur are processed in every files.

Values read from the input files are divided by the scale factor given in the 5th line. This value must be selected to make the unit of data in the output file is ‘mkine’, i.e., 1.0E-5 M/sec for ground velocity. For ground acceleration ‘gal’, i.e., 1.0E-2 M/sec^2 should be used. Otherwise the amplitudes of the data will be erroneously shown in the output figures.

Execution:

sh ./multipx6.sh

```
yokoi@ubuntu: ~/CCA2017/CCA2017
yokoi@ubuntu:~/CCA2017/CCA2017$ sh ./multipx6.sh
  Working Folder=./cca_wkf/prm/
  Nch=           3  dt=   9.99999978E-03
  Scale Factor=   1.00000000
  Does this scale convert the unit of data mkine ?
  Please change the value if not.
           0           3  0.100000001       1.00000000       1.5000000

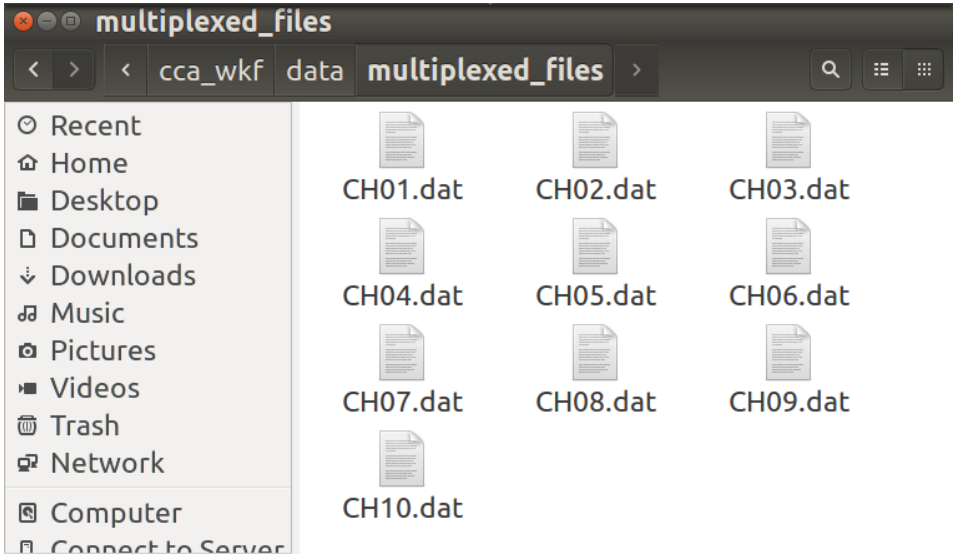
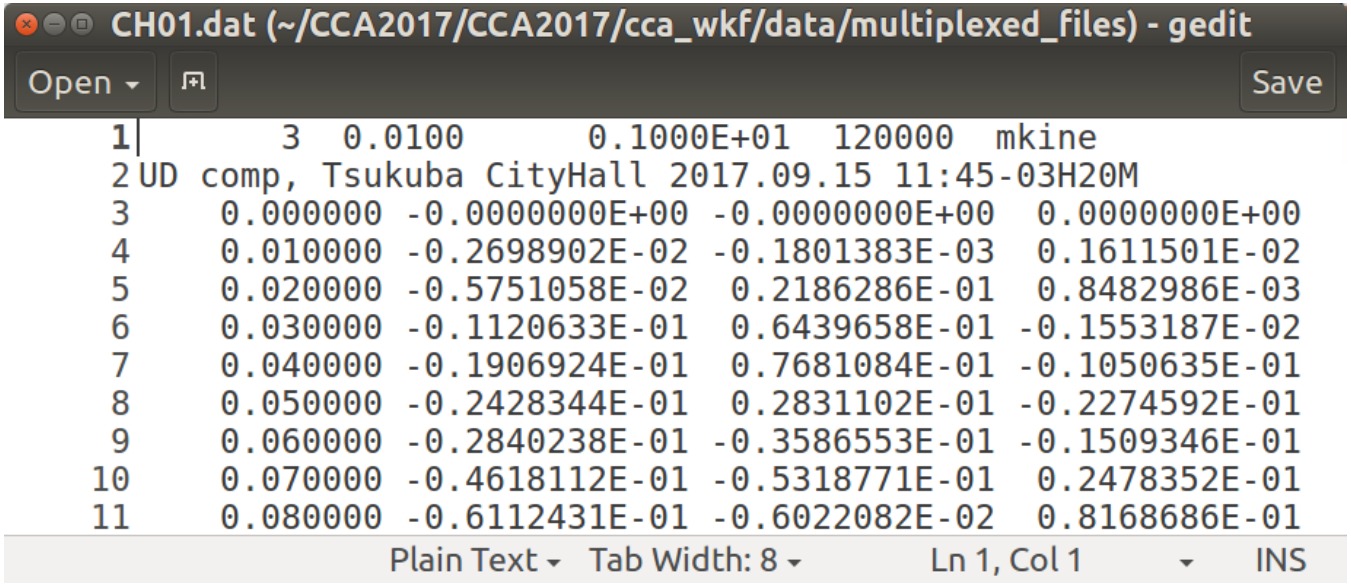
cd cca_wkf/data/multiplexed_files
ls *.dat > mltfile.lst
cd ../../..
```

10 multiplexed data files are created in “./cca_wkf/data/multiplexed_files”



Format of multiplexed file:



1.2 Resampling & Screening

Shell Script used

sh ./resamplec.sh

Program and parameter file used:

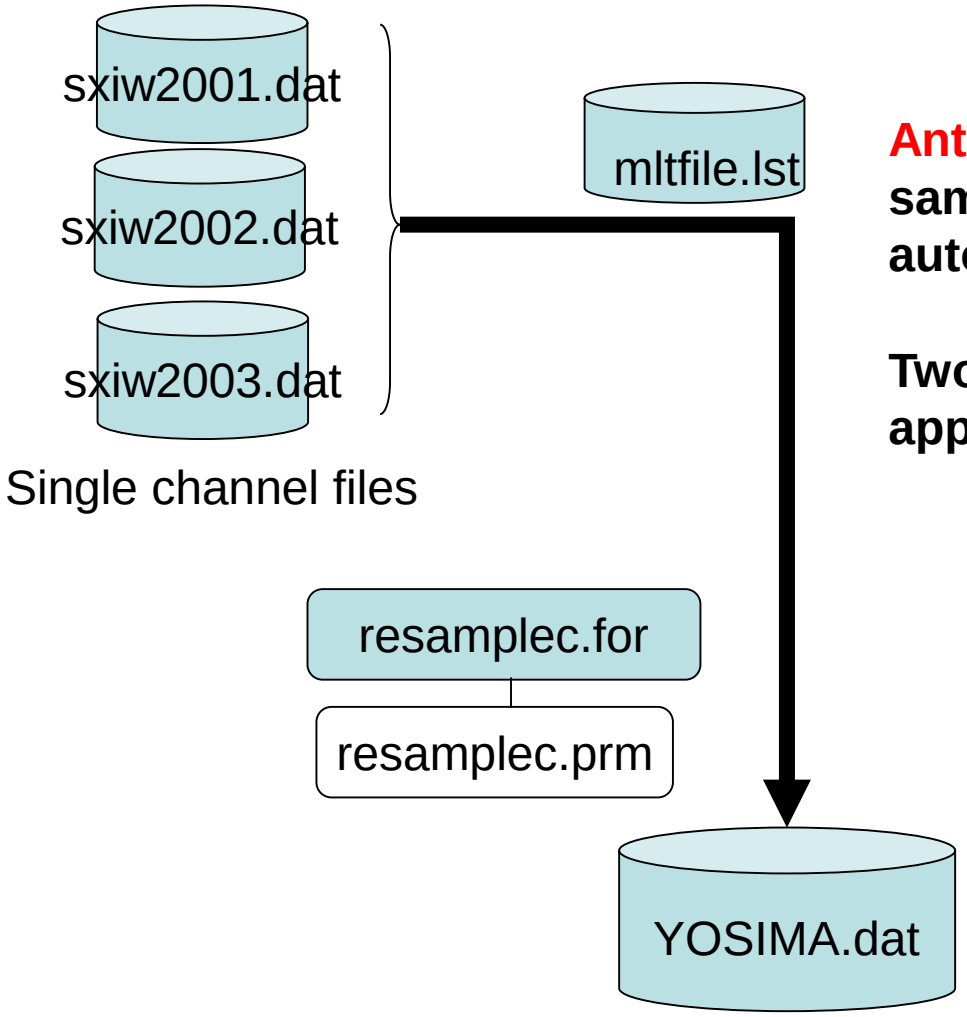
resamplec.exe +./cca_wkf/prm/resamplec.prm

Terminology

Re-sampling:

It can be done to thin the data out in order to reduce the size of data files and the load to PC for processing. This can cause the aliazing effect. Then, it Is necessary to apply the digital anti-alias filter that has high cut characteristics before thinning out.

Multi-channel data files from the same array configuration



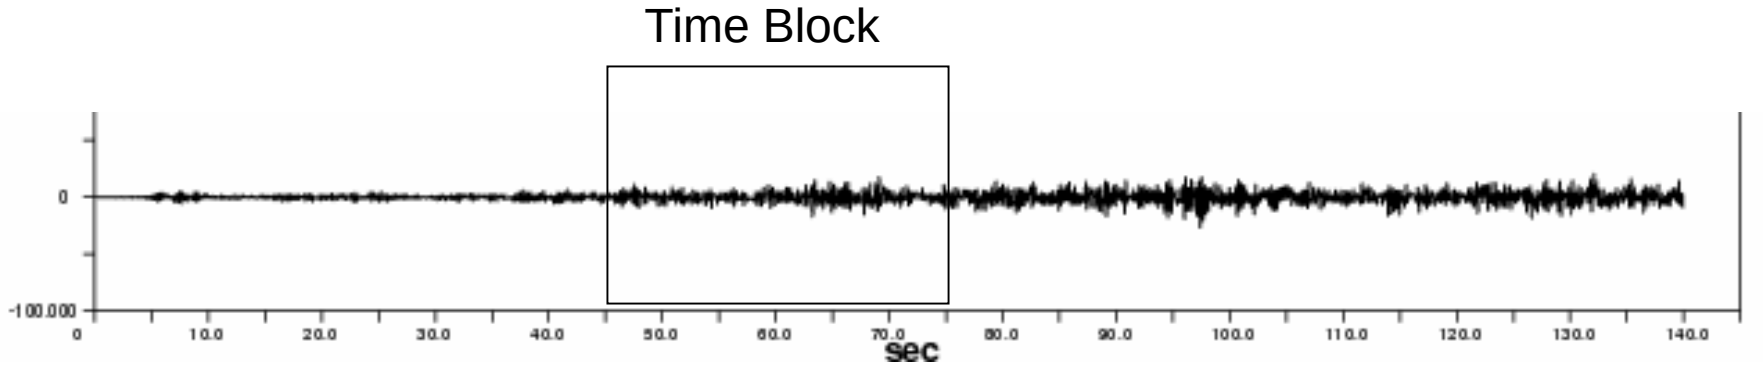
Anti-alias filter for re-sampling is applied automatically.

Two steps for screening are applied.

Resampled & screened multi-channel & multi-measurement data file

Screening: Step-1

Parameter: ajudge



If the maximum amplitude in a time block exceeds the product of "ajudge" to RMS amplitude of the same time block, this time block is not used in analysis.

This is a countermeasure against impulsive noise due to traffic, i. e., vehicles passing near by seismometers.

The bigger value of "ajudge" means looser screening. The smaller value means fewer available time blocks.

Screening: Step-2

Parameter: a_sgm

If the RMS amplitude in a time block deviates more than a_sgm X the standard deviation from the average, this time block is not used in analysis, where the average and the standard deviation are calculated over the all time blocks that survived in the screening step-1.

This is a countermeasure against outliers.
The bigger value of “a_sgm” means looser screening. The smaller value means fewer available time blocks.

resamplc.sh:

```
#! /bin/sh -x
./resamplec.exe | tee cca_wkf/log/resamplec.log
```

Example of resamplec.prm:

```
 6 0.008  2   0.0  0  2.0   :nch,dt,nchannel,dt,nskip,ph0,ncenter,radius
5.0 3.0                     :ajudge,a_sgm
0.0 1800.0                  :tst,tdur
F2LNN1.dat                  :output file name
1024                        :number of data in one time block after resampling
```

where
nskip: skip number for resampling (1: no resampling, 2: resample at every two samples)
ph0: azimuth from the center(1ch) to 2ch
ncenter: 0 (no sensor at the center) or 1 (1ch at the center) , cannot be bigger than 2
radius: radius of circular array (m)
tst: start time of analysis (sec)
tdur: duration of time window for analysis (sec)

Execution:

```
yokoi@ubuntu: ~/CCA2017/CCA2017
yokoi@ubuntu:~/CCA2017/CCA2017$ sh resamplec.sh
./cca_wkf/prm/resamplec.prm
Working Folder=./cca_wkf/prm/

Nch=   6
Nskip   2 f(Nyquist)=  31.250 fs=  28.125
ajudge=   5.0 a_sgm=   3.0
 tst =     0.0 tdur=  1800.0
 F2LNN001.dat
  1 measurement
 First screening (peak/rms<  5.0):
 i_mea=           1
 F2LNN001.dat
           1 -th measurement:./cca_wkf/data/multiplexed_files/F2LNN001.dat
         122  blocks remained among          218  blocks
  Data stored in the temporary file
 ./cca_wkf/data/resampled_files/F2LNN1.dat

  Second screening ({rms-average(rms)}/sigma<   3.00000000     ):
         120  blocks remained among          122  blocks
yokoi@ubuntu:~/CCA2017/CCA2017$
```

Example of Output (resampled) file format

F2LNN1.dat

1st line:file parameters

1st block

2nd block

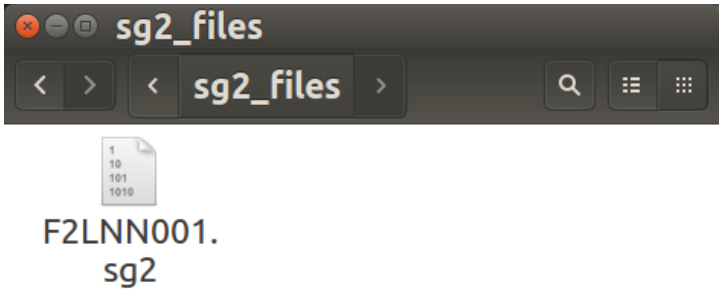
```
 6  120 1024 0    0.00    2.00 (i8,f16.4, 6e15.7) mkine
       1          8.1920 -0.2134265E+01 -0.1570028E+01 -0.1464243E+01 -0.1183819E+01 -0.1944440E+01 -0.2460508E+01
       2          8.2080 -0.8561512E+00 -0.1420853E+00  0.5698163E+00 -0.7201288E+00 -0.8229986E+00 -0.1031229E+01
       3          8.2240 -0.1268116E+01 -0.1240067E+01 -0.2134730E+00 -0.2036263E+00 -0.3363592E+00 -0.7179448E+00
       4          8.2400 -0.1921562E+01 -0.1946060E+01 -0.1426458E+01  0.5525613E+00  0.5879311E-01 -0.1037454E+01
       ....
    1024         24.5600  0.2423161E+01  0.9976824E+00  0.2375970E+01  0.6267622E+01  0.5800716E+01  0.4042787E+01
       1         16.3840  0.5473618E+01  0.3885463E+01  0.6374265E+01  0.4033590E+01 -0.3046133E+01  0.5571502E+00
       ….
```

The file include mmblk=120 time blocks of nch=6 channel data. Each time block is composed of nblk=1024 data.
Each line corresponds to a time step. The format used to store each line is cform3='(i8,f16.4, 7e15.7)'.
Unit of data is 'mkine' (=1.0e-3 cm/sec)
These parameters are stored in the 1st line.

As all of the data are delimited by space, this file can be read using free format.

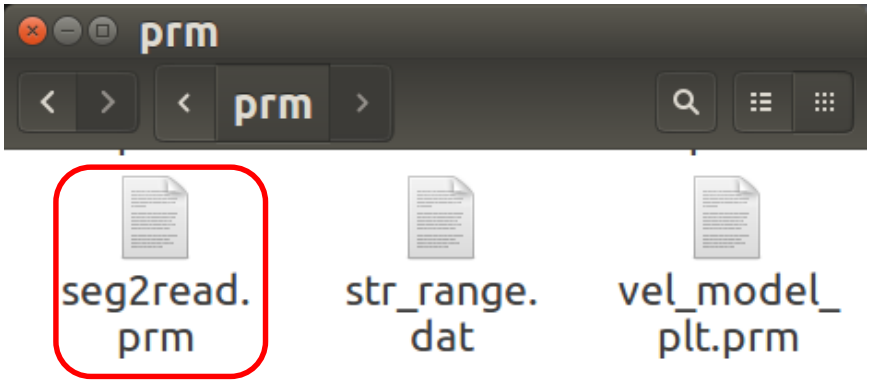
Example 1-1: For Field Data:

Copy the field data file “F2LNN001.sg2” into “./cca_wkf/data/sg2_files”.



Edit the parameter file “seg2read.prm” in “./cca_wkf/prm”.

```
(seg2read.prm)
LCCM,Field,r=2m,L22D,No_Rs,No_A_amp,D_amp=X1,F2LNN0,Mar.15,2012      :comm(a70)
5.E-3    : scaling factor (for output files in mkine(1.e-3cm/s))
sg2      : extension of input seg2 format files(a3)
dat      : extension of output ascii text files(a3)
0 3 0.1 1.0 1.5  :nfilter(=1:apply),nchara=3:bandpass),fl,fh,fs
pvlist 1 2 3 4 5 6  : Channel Pivoting
```

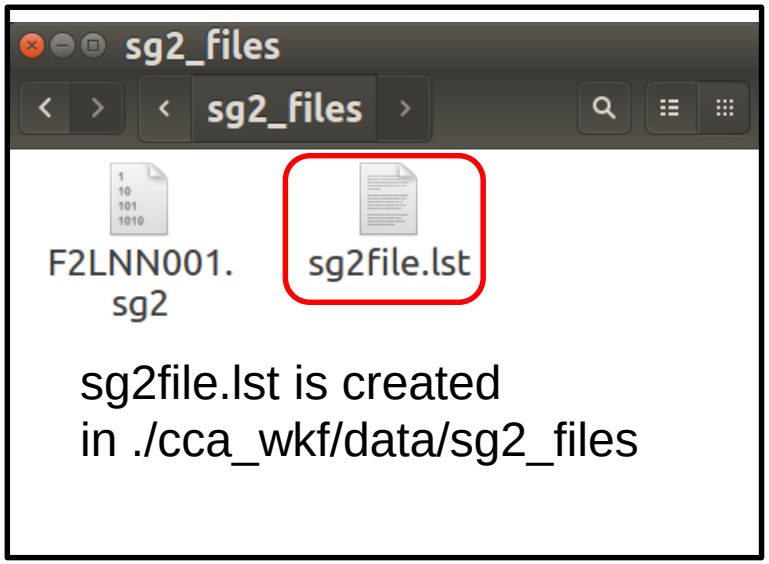


The array used in the field has 6 sensors, but none of them at the center. They were installed counter-clockwise order. Then, pvlist 1 2 3 4 5 6 :

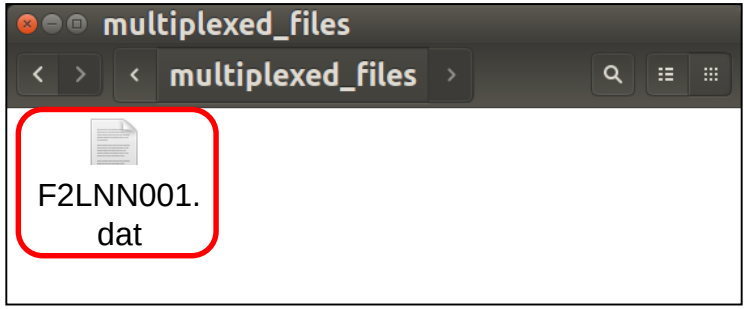
Example 1-1 (cont): Execution

```
yokoi@ubuntu: ~/CCA2017/CCA2017
yokoi@ubuntu:~/CCA2017/CCA2017$ sh ./seg2read.sh
./cca_wkf/prm/seg2read.prm
./cca_wkf/data/sg2_files/sg2file.lst
 F2LNN001.sg2

./cca_wkf/data/sg2_files/F2LNN001.sg2
./cca_wkf/data/multiplexed_files/F2LNN001.cdm
nch= 12 dt= 0.008 nn=  225000
     1 files have been converted.
Normal End.
yokoi@ubuntu:~/CCA2017/CCA2017$
```



Input file is ./cca_wkf/data/sg2_files/F2LNN001.sg2
Multiplexed output is ./cca_wkf/data/multiplexed_files/F2LNN001.cdm
Log file is stored in ‘cca_wkf/log/seg2read.log’



Example 1-1(Cont): For Field Data

(mltfile.lst for “multiplexed_files)
F2LNN001.dat

(resamplec.prm)
```

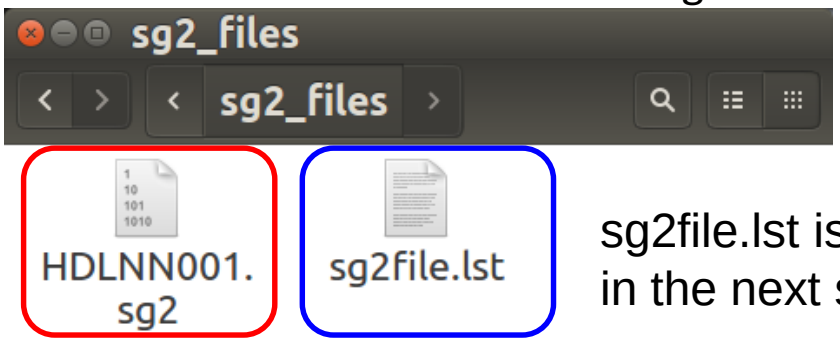
Example 1-2: For Huddle Test Data:

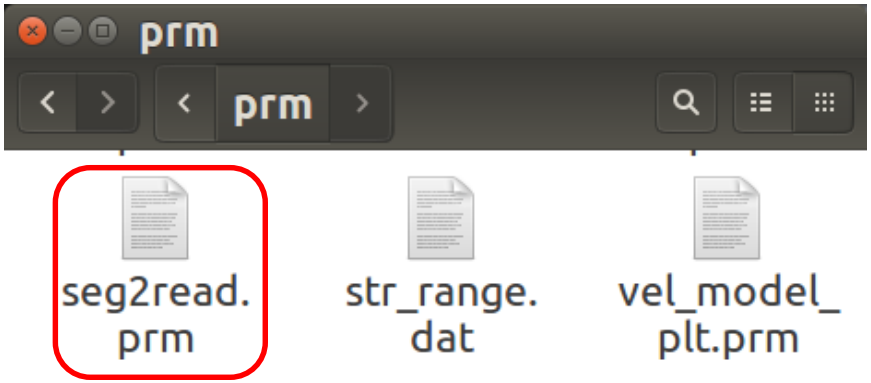
Copy the Huddle Test data file “HDLNN001.sg2” into “./cca_wkf/data/sg2_files”.



sg2file.lst is overwritten in the next slide

Edit the parameter file “seg2read.prm” in “./cca_wkf/prm”.

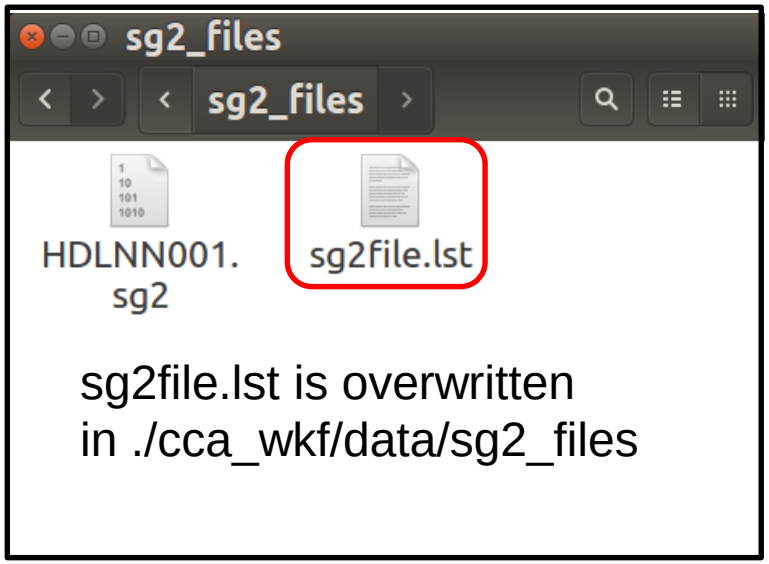
```
(seg2read.prm)
LCCM,Huddle,r=0m,L22D,No_Rs,No_A_amp,D_amp=X1,HDLNN0,Mar.15,2012      :comm(a70)
5.E-3     : scaling factor (for output files in mkine(1.e-3cm/s))
sg2       : extension of input seg2 format files(a3)
cdm       : extension of output ascii text files(a3)
0 3 0.1 1.0 1.5  :nfilter(=1:apply),nchara=3:bandpass),fl,fh,fs
pvlist 1 2 3 4 5 6   : Channel Pivoting
```



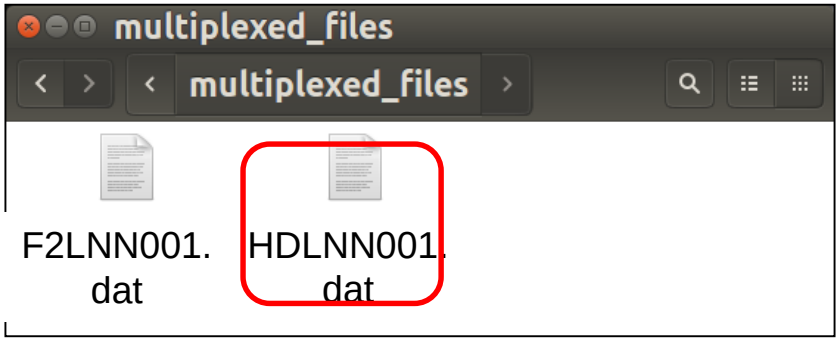
Example 1-2(cont): Execution

```
yokoi@ubuntu: ~/CCA2017/CCA2017
yokoi@ubuntu:~/CCA2017/CCA2017$ sh seg2read.sh
./cca_wkf/prm/seg2read.prm
./cca_wkf/data/sg2_files/sg2file.lst
 HDLNN001.sg2

./cca_wkf/data/sg2_files/HDLNN001.sg2
./cca_wkf/data/multiplexed_files/HDLNN001.cdm
nch= 12 dt= 0.008 nn=   37500
     1 files have been converted.
Normal End.
yokoi@ubuntu:~/CCA2017/CCA2017$
```



Input file is ./cca_wkf/data/sg2_files/HDLNN001.sg2
Multiplexed output is ./cca_wkf/data/multiplexed_files/HDLNN001.cdm
Log file is stored in 'cca_wkf/log/seg2read.log'



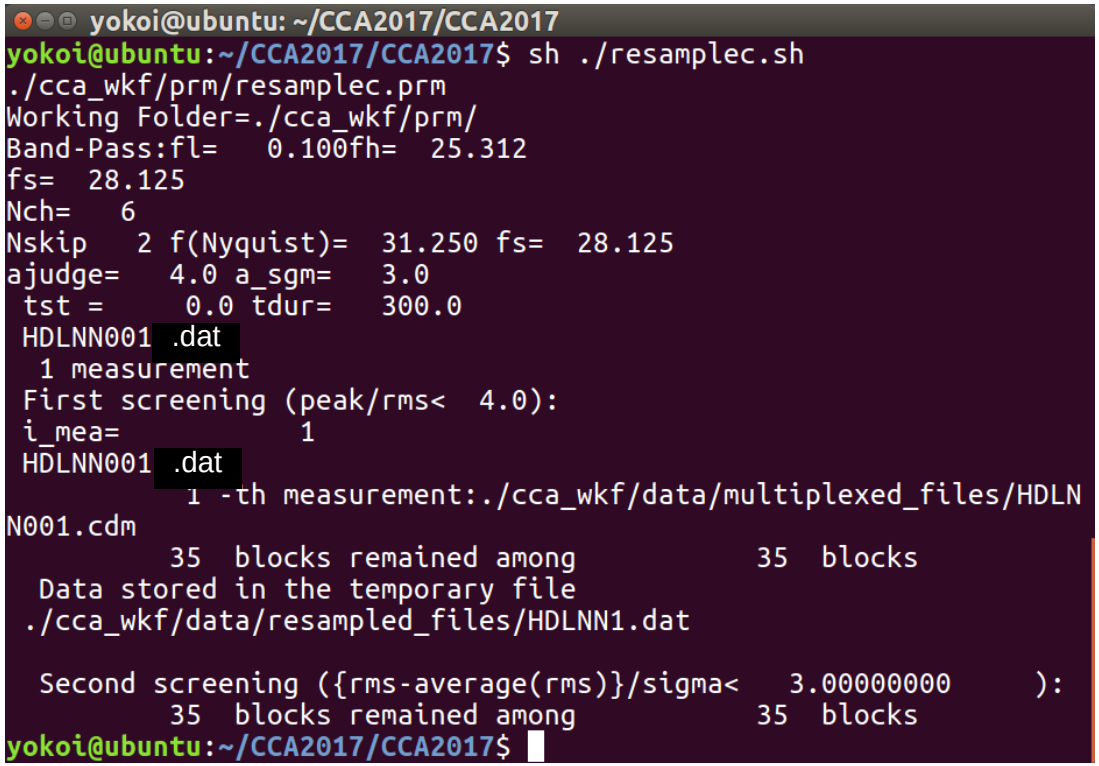
Example 1-2 (cont) For Huddle Test Data

(mltfile.lst for “multiplexed_files)
HDLNN001.dat

It is necessary to edit resamplec.prm

(resamplec.prm)

```
 6 0.008   2    0.0   0   0.0   :nch,dt,nskip,ph0,n_center,rr
4.0 3.0                          :ajudge,a_sgm
0.0   300.0                      :tst,tdur
HDLNN1.dat                       :output file name
1024                             :number of data in one time block after resampling
```



Output file: cca_wkf/data/resampled_files/HDLNN1.dat

This parameter must be 0.0 for Huddle Test Data !

seewavc.for

seewavc.prm

Figure in Multi-page Post Script file. Post Script file can be opened, for example, by "gv &".

seewavc.sh:

```
#! /bin/sh -x
cd cca_wkf/data/multiplexed_files
ls *.cdm > mltfile.lst
cd ../../..
./seewavc.exe | tee cca_wkf/log/seewavc.log
```

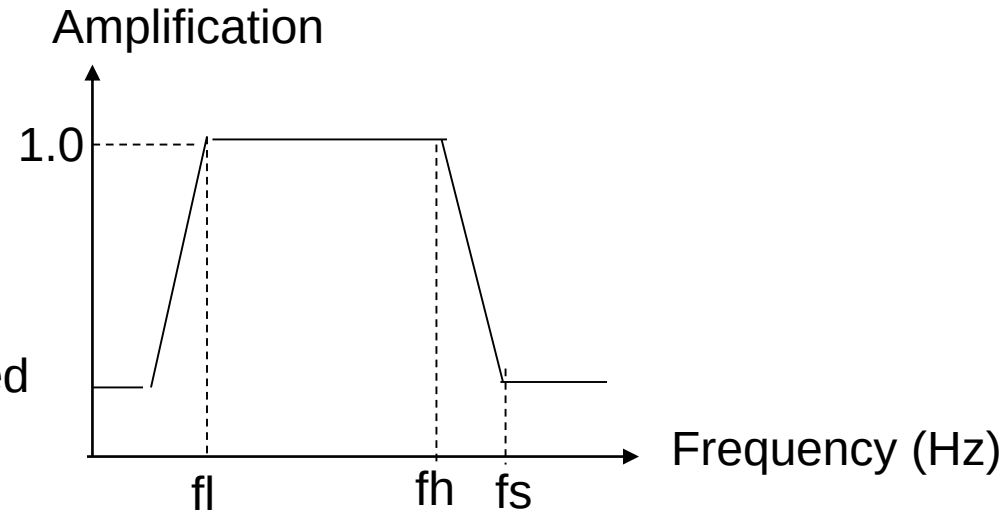
seewavc.prm

dtl denotes the time duration that corresponds to 1cm along the time axis.
In one page, 28*dtl/dt time step can be plotted. If the file has more, new pages are automatically added as much as necessary and multi-page PS file is created.

```
6                                   :nch
0 0.1    1.0 1.5 3                  :nfilter,fl,fh,fs,nchara(=2:lowpass, =3:bandpass)
  25.                               :dtl(sec/cm),25,50==>10,20 min/page
```

nbandp=0: no effect
nbandp=1: bandpass filter is applied

Band Pass Filter



This BPF does not affect to the data files.

Example 1-3: execution

```
yokoi@ubuntu: ~/CCA2017/CCA2017
yokoi@ubuntu:~/CCA2017/CCA2017$ sh ./seewavc.sh
F2LNN001.cdm

```
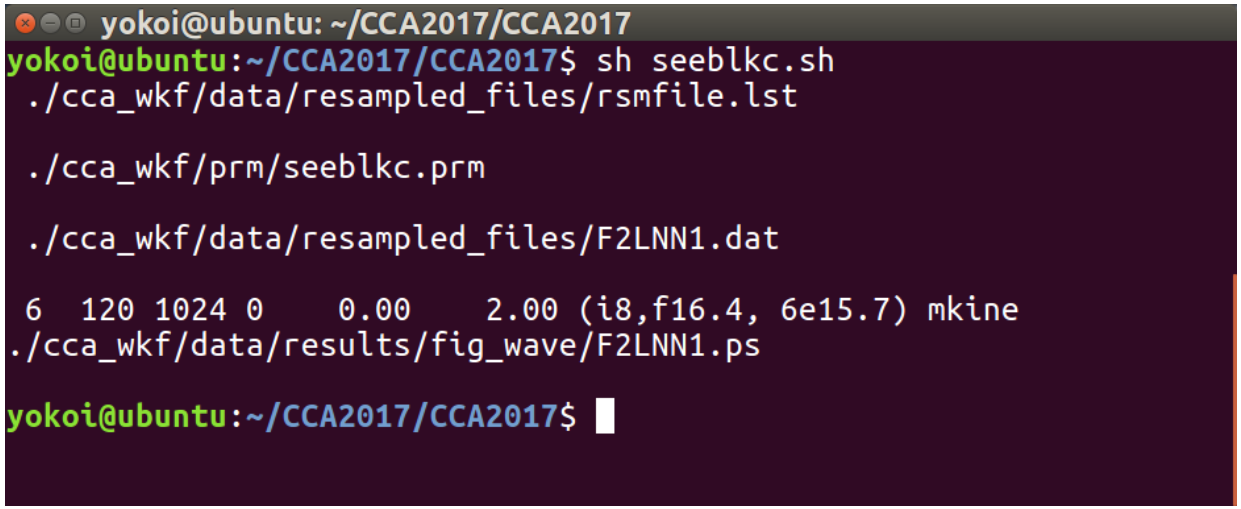
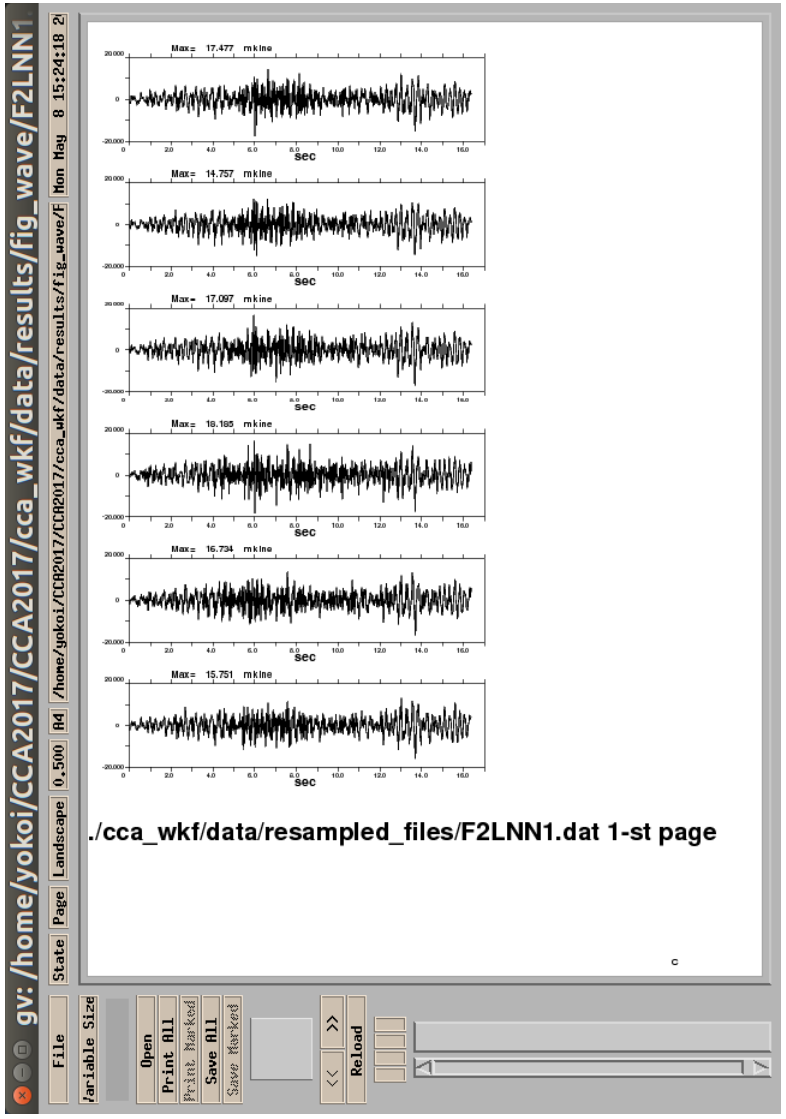
 0 0.1 1.0 1.5 3    :nfilter,fl,fh,fs,nchara(=2:lowpass, =3:bandpass)
```

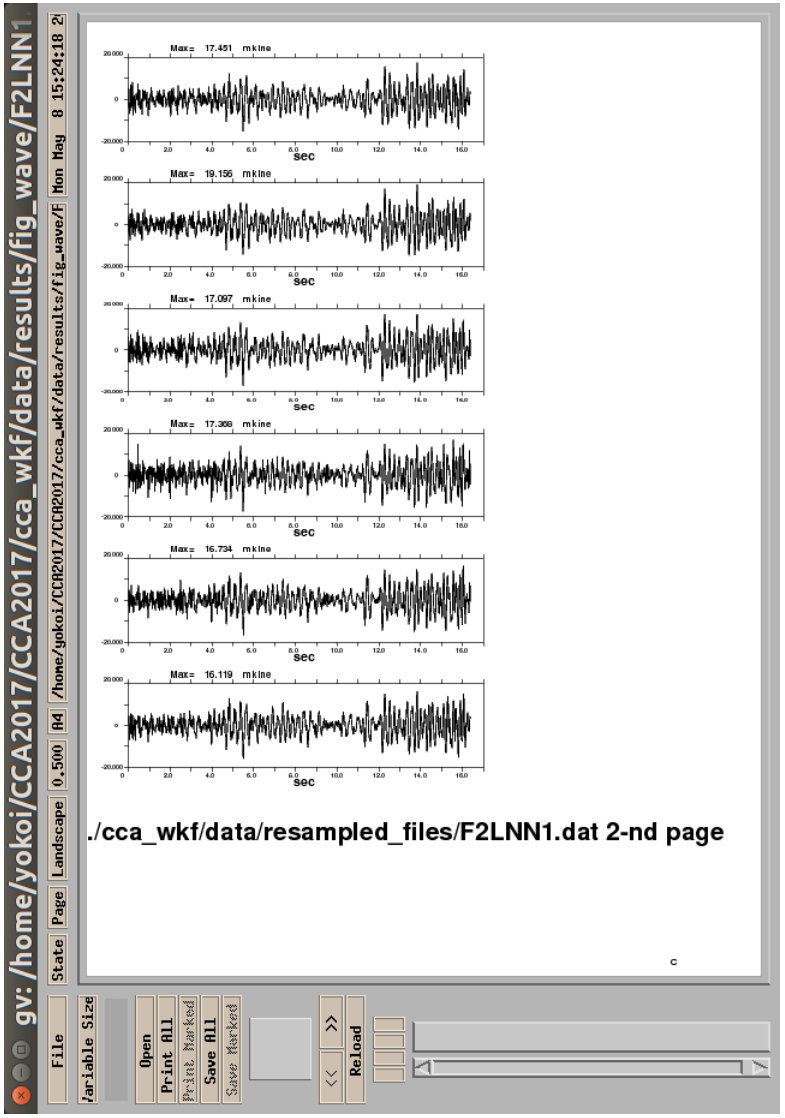
Example 1-4: Execution



Multi-page postscript files are created in ./cca_wkf/data/results/fig_wave
Log file is stored in ./cca_wkf/log/seeblkc.log

Example 1-7: PostScript File





Multi-page postscript files are created in ./spacwkf/data/results/fig_wave

2. Estimating Dispersion Curve
2.1 Calculation of CCA coefficient

Shell Script used

sh ./pwrcrs3.sh

Program and parameter file used:

pwrcrs3.for +./ccawkf/prm/pwrcrs3.prm

Terminology

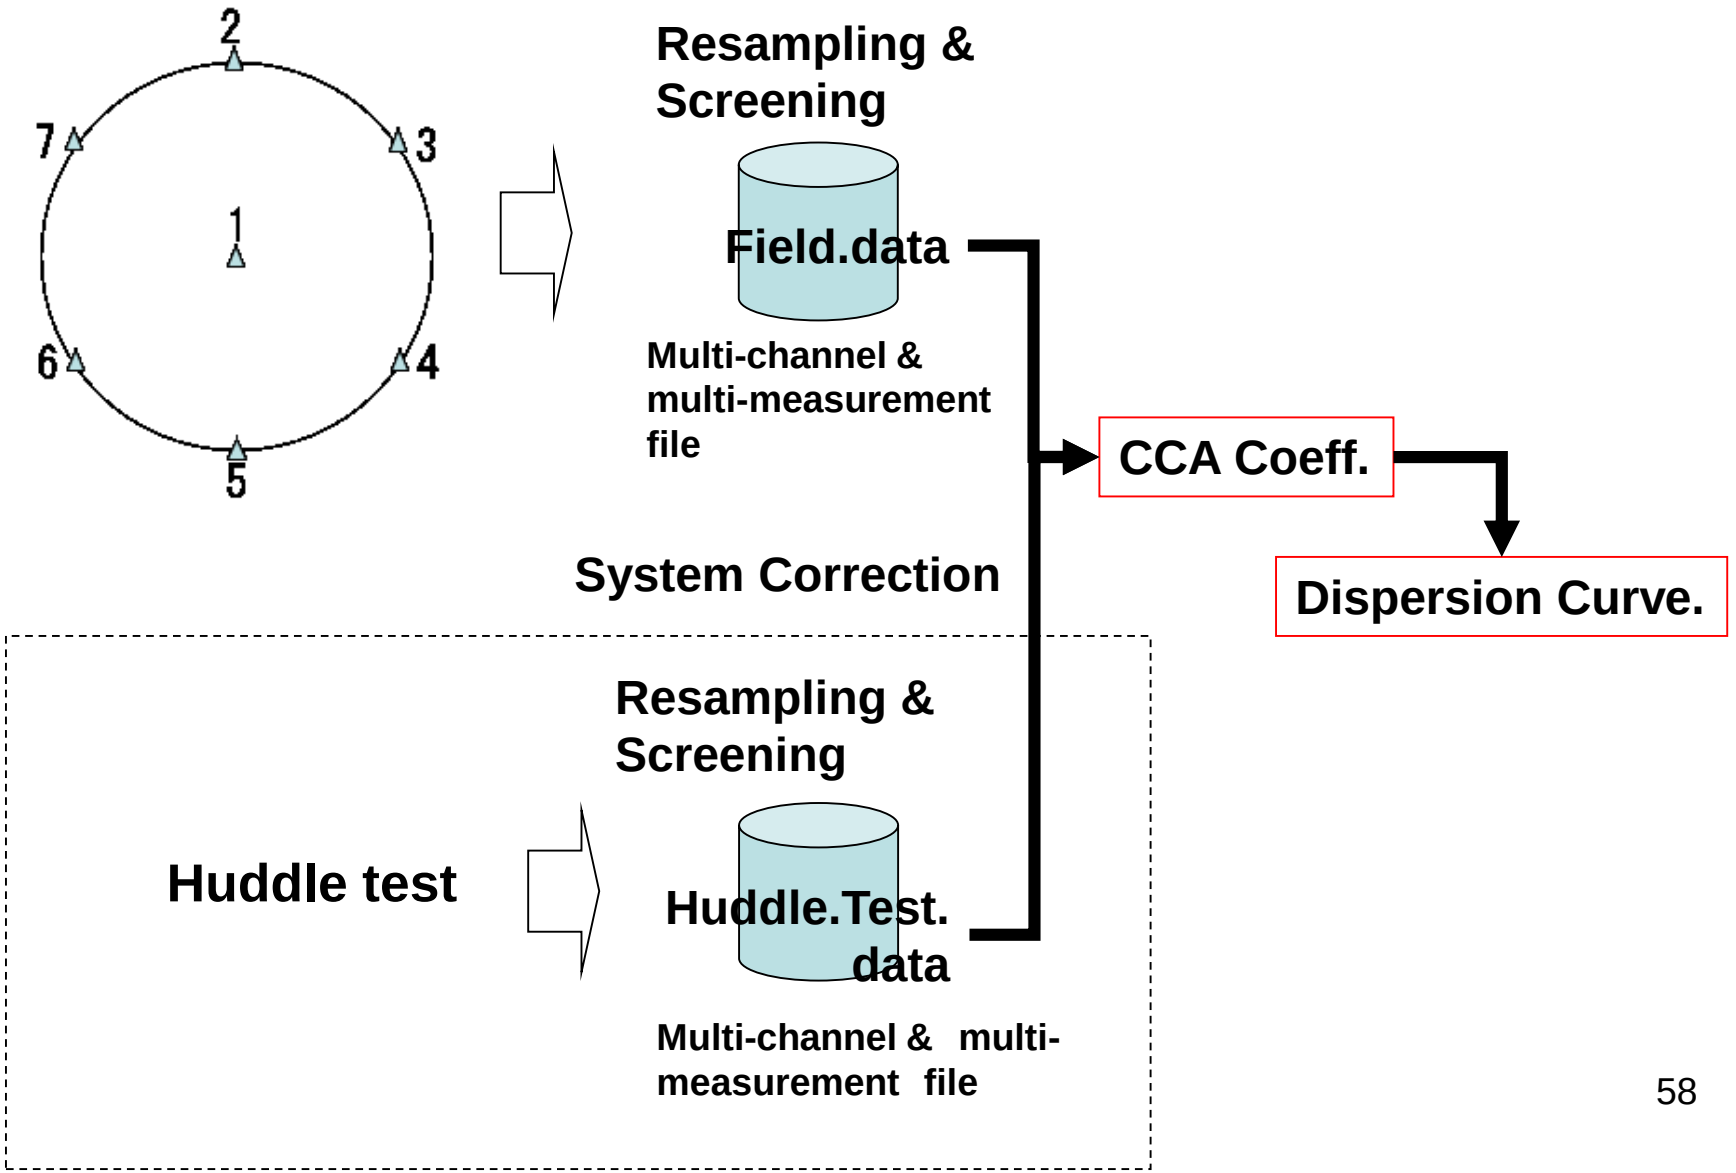
Huddle test:

Common input motion recording to determine the difference of the system characteristics among the recording system and/or channels.
The seismometers used in field measurement are put close each other like a huddle and simultaneous recording is conducted.

System correction:

The difference of the characteristics among the recording system can be corrected using the data obtained by huddle tests.

Flow of the data processing for CCA



pwrcrs3.sh

```
#! /bin/sh
./pwrcrs3.exe 2>&1 | tee cca_wkf/log/pwrcrs3.log
```

Example of pwrcrs3.prm:

```
1.0 25.0 0.016 0.25  1 .5 :fmin,fmax,dt,bw,n_huddle,smthf
HDLNN1.dat     1 1        :Huddle Test data File name(A12), n_coh,n_pow

```

CCA coefficient

calculated in the frequency domain

n_huddle=0

$$s_{CCA'}(r,\omega) \approx \frac{\sum_{m=1}^{M}\sum_{m'=1}^{M} E\left[C_{m,m'}(r,\omega)\right]}{\sum_{m=1}^{M}\sum_{m'=1}^{M} E\left[C_{m,m'}(r,\omega)\right]\exp\left\{-i\left(\theta_m-\theta_{m'}\right)\right\}} \approx \frac{J_0^2\left(r\omega/c\right)}{J_1^2\left(r\omega/c\right)}$$

n_huddle=1

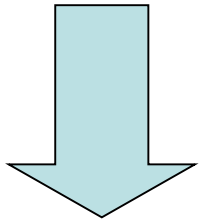
$$s_{CCA}(\omega) = \frac{\sum_{i=1}^{M}\sum_{k=1}^{M} R_{ik}(\omega)}{\sum_{i=1}^{M}\sum_{k=1}^{M} R_{ik}(\omega)exp\left\{-j\left(\theta_i-\theta_k\right)\right\}}$$

$$R_{ik}(\omega) = \frac{C_{00}^{obs}(\omega)E\left[C_{ik}^{obs}(\omega)\right]\overline{Cor_{ik}^{huddle}(\omega)}}{\sqrt{E\left[C_{ii}^{obs}(\omega)\right]E\left[C_{kk}^{obs}(\omega)\right]}}$$

$$\overline{Cor_{ik}^{huddle}(f)} = \exp\left\{ jE\left[Arg\left(\frac{\sqrt{C_{ii}^{huddle}(f)\cdot C_{kk}^{huddle}(f)}}{C_{ik}^{huddle}(f)} \right)\right]\right\}$$

KR derived from CCA coefficient

$$s(r,\omega)=\frac{J_0^2(r\omega/c)}{J_1^2(r\omega/c)}$$



Long wavelength apploximation
(Small value of *kr*) (Cho et al,2006)

$$c(\omega)=\frac{r\omega}{2}\sqrt{s(r,\omega)+2}$$

Improved approximation:Yokoi(2012)

$$\mathrm{c}(\omega)/\mathrm{r}\omega=1.0003\left(\frac{\sqrt{\mathrm{s}(\mathrm{r},\omega)+0.97221}}{2.0003}+0.0015245\right)-0.0138$$

Estimate c(ω) using the relation KR=2πR/c(ω)

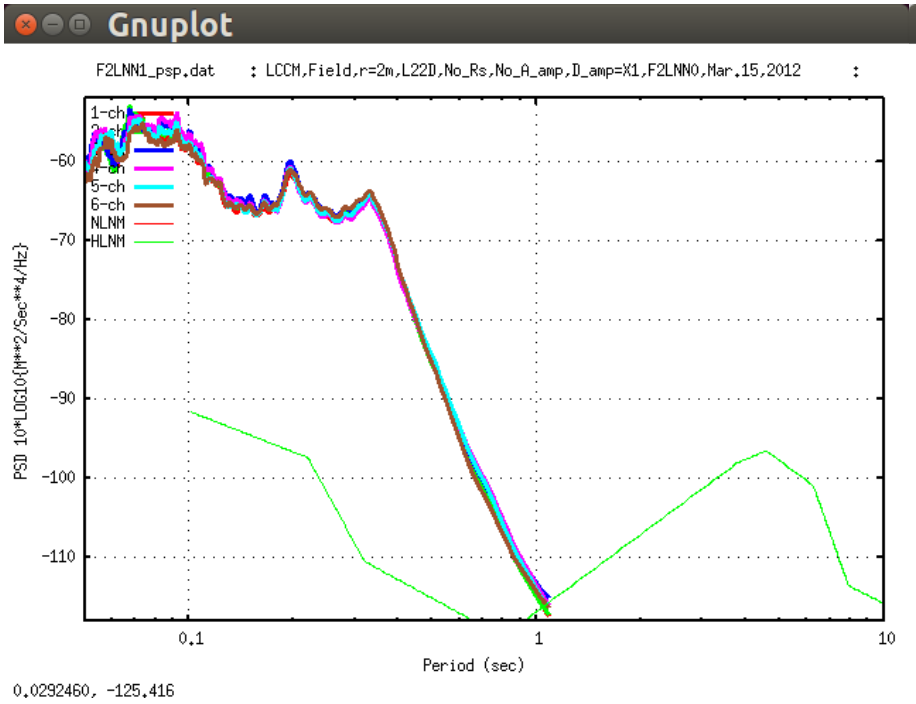
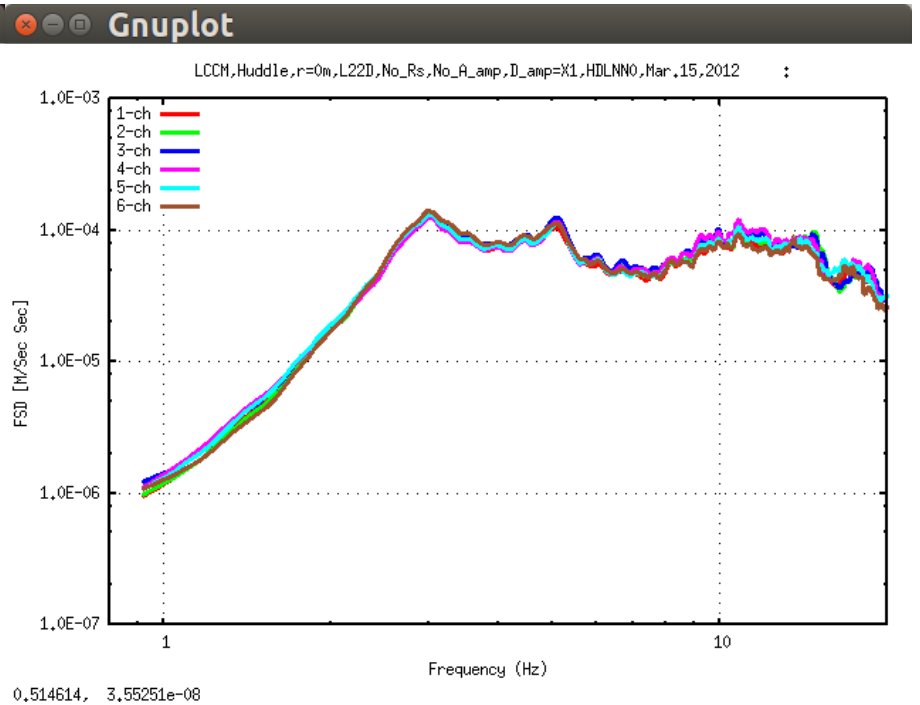
Power & Fourier Spectra

(Example 1-5)

(Acceleration) Power Spectra



(Velocity) Fourier Spectra



Power spectra corrected using huddle test records are in “cca_coef.dat” and its example is shown few slide later.

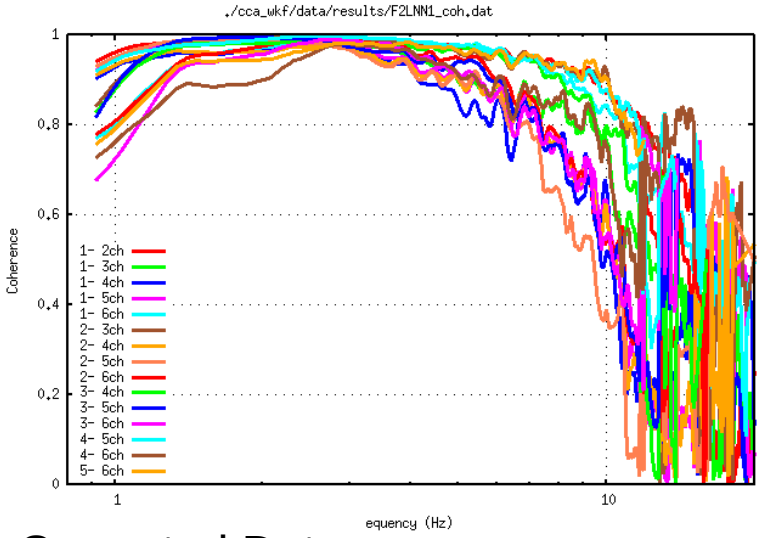
In the shown example, seismometers of which natural frequency is 2Hz are used, then the power & Fourier spectra decays in the frequency range lower than that frequency.

These figures are stored in ./cca_wkf/data/results/fig_results in PostScript format.

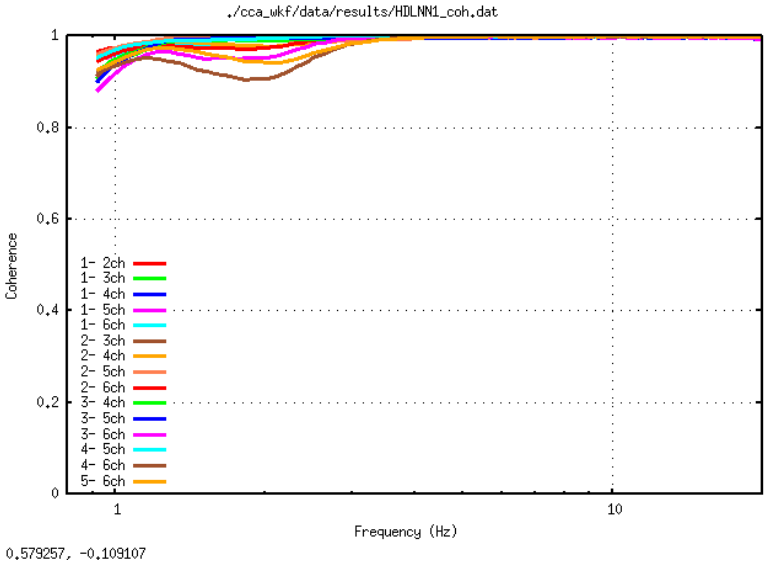
Coherence

(Example 1-5)

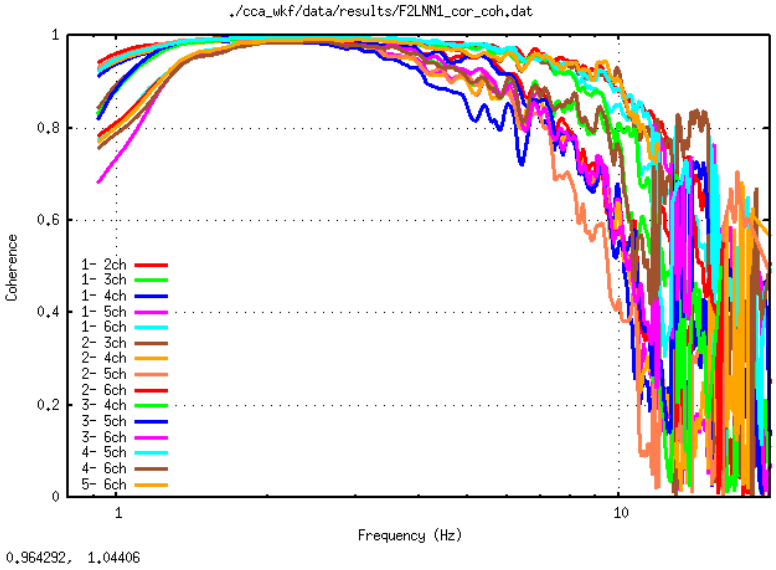
Field Data



Huddle Test Data



Corrected Data



These figures are stored in ./cca_wkf/data/results/fig_results in PostScript format.

cca_coef.dat

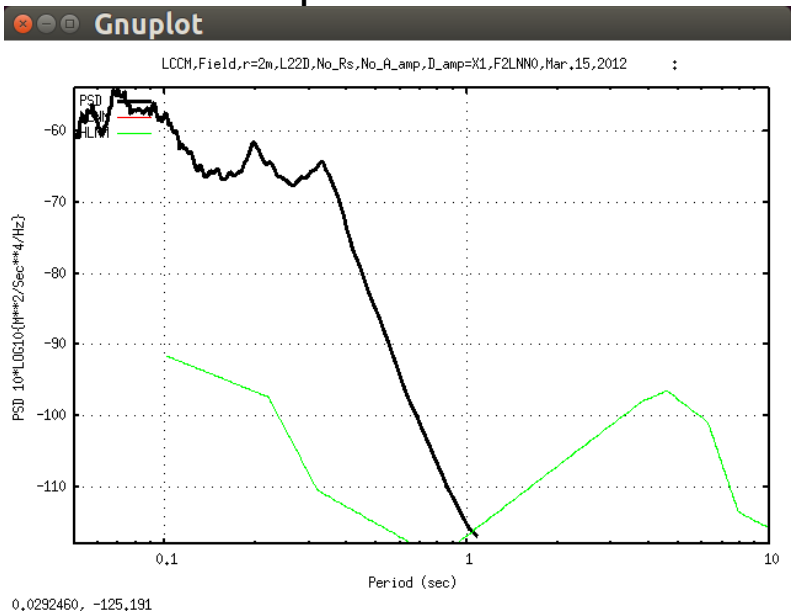
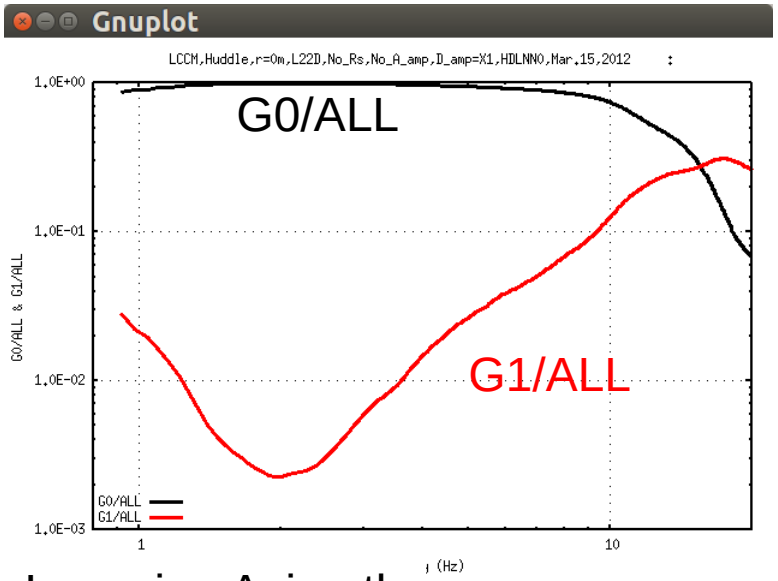
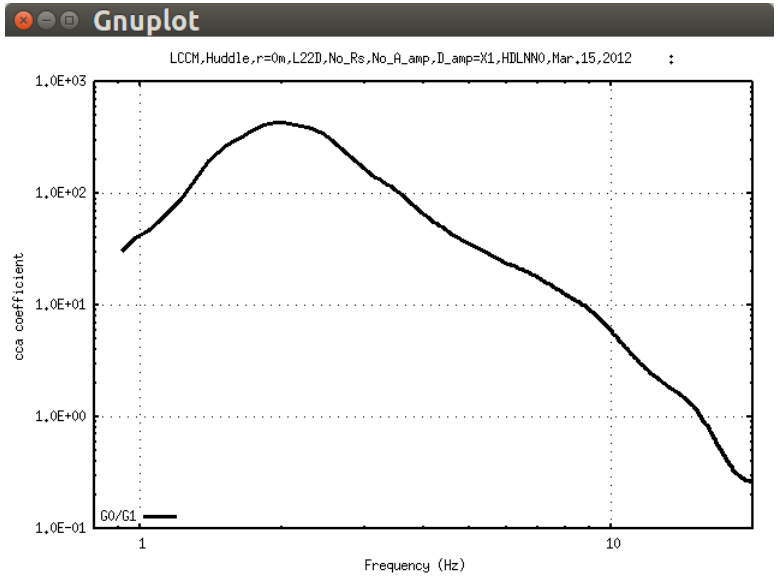
Power Spectra of ch1

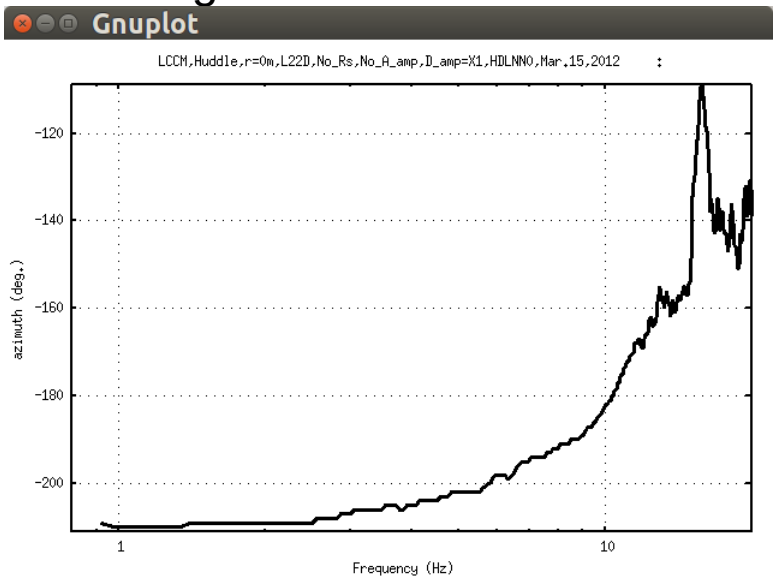


G0/ALL & G1/ALL



Incoming Azimuth

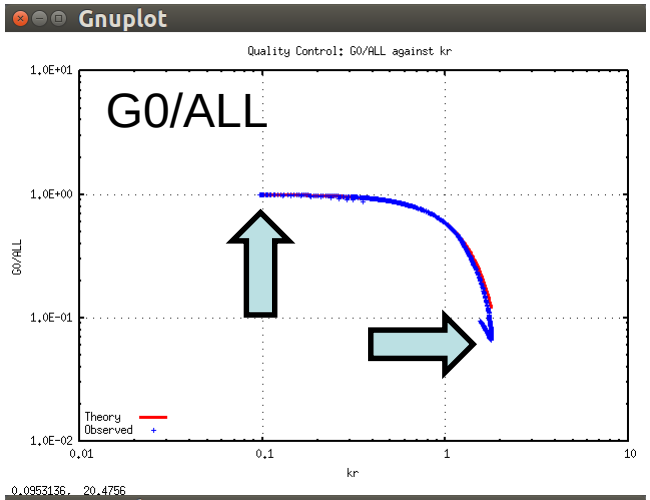


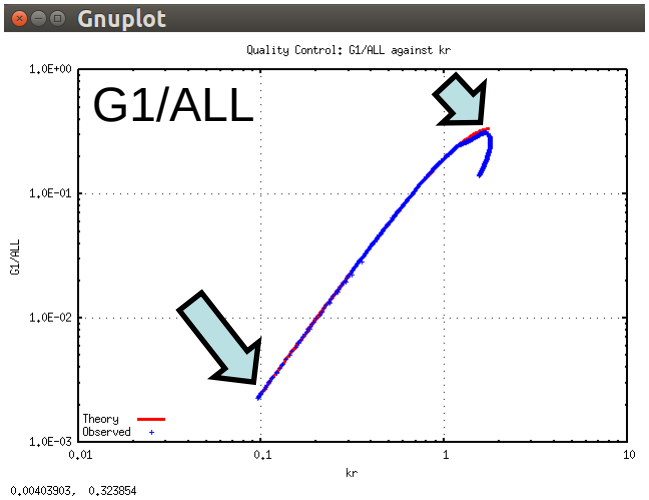


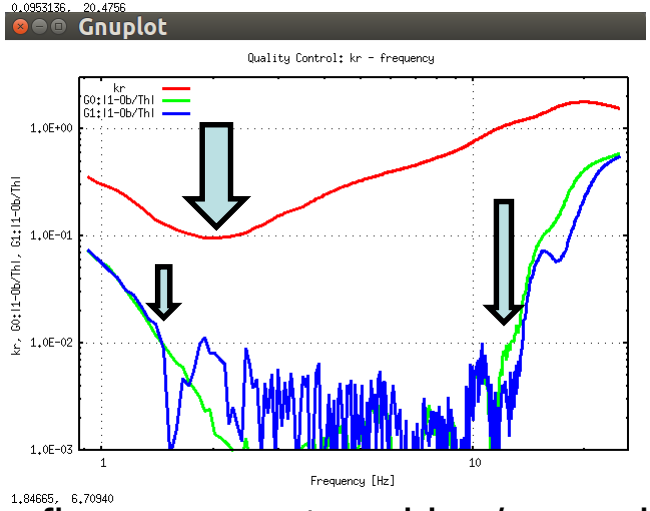
These figures are stored in ./cca_wkf/data/results/fig_results in PostScript format.

Quality Control

Using the values of “kr” in the file “dispersion.dat”, Z0/ALL and Z1/ALL in the file “cca_coef.dat” are compared with the theoretical $J_0(kr)^2$ and $J_1(kr)^2$, respectively. Arrows indicate the limit of the range of “kr” for analysis, where the observed curves run off from the theoretical ones.







(Example 1-5)

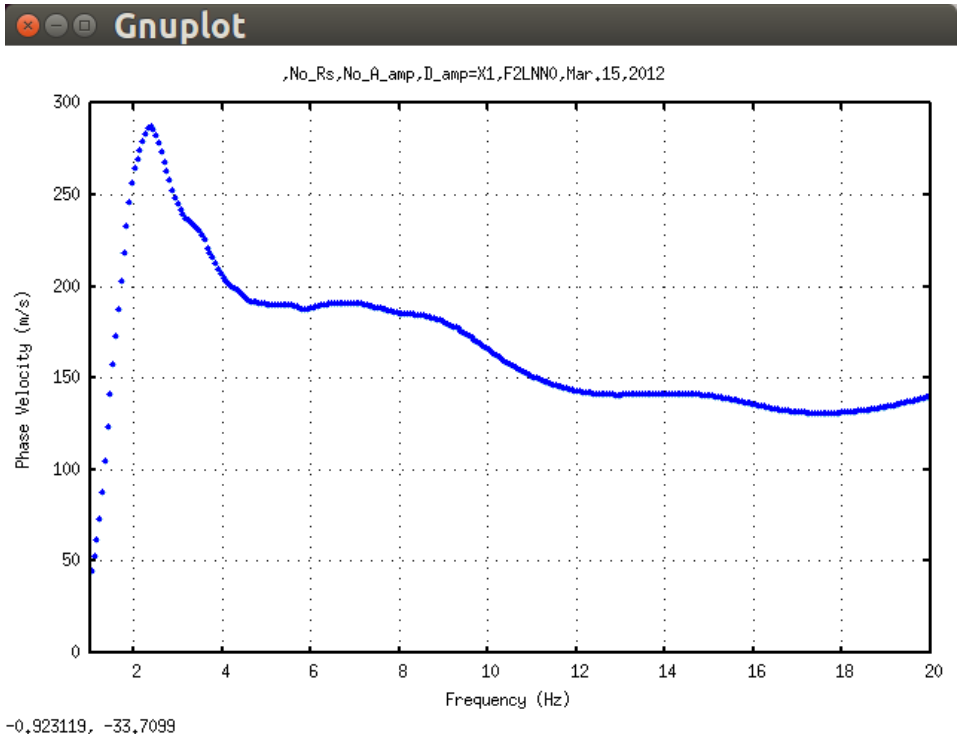
These figures are stored in ./cca_wkf/data/results/fig_results in PostScript format.

dispersion.dat

(Example 1-5)

Frequency	Velocity	Azimuth	KR
0.916	32.348	-208.786	0.356
0.977	39.342	-210.076	0.312
1.038	44.918	-210.351	0.290
1.099	52.573	-210.471	0.263
1.160	61.721	-210.378	0.236

…



This figure is stored in ./cca_wkf/data/results/fig_results in PostScript format.

4. Heuristic Search of Vs Structure

Shell Script used:

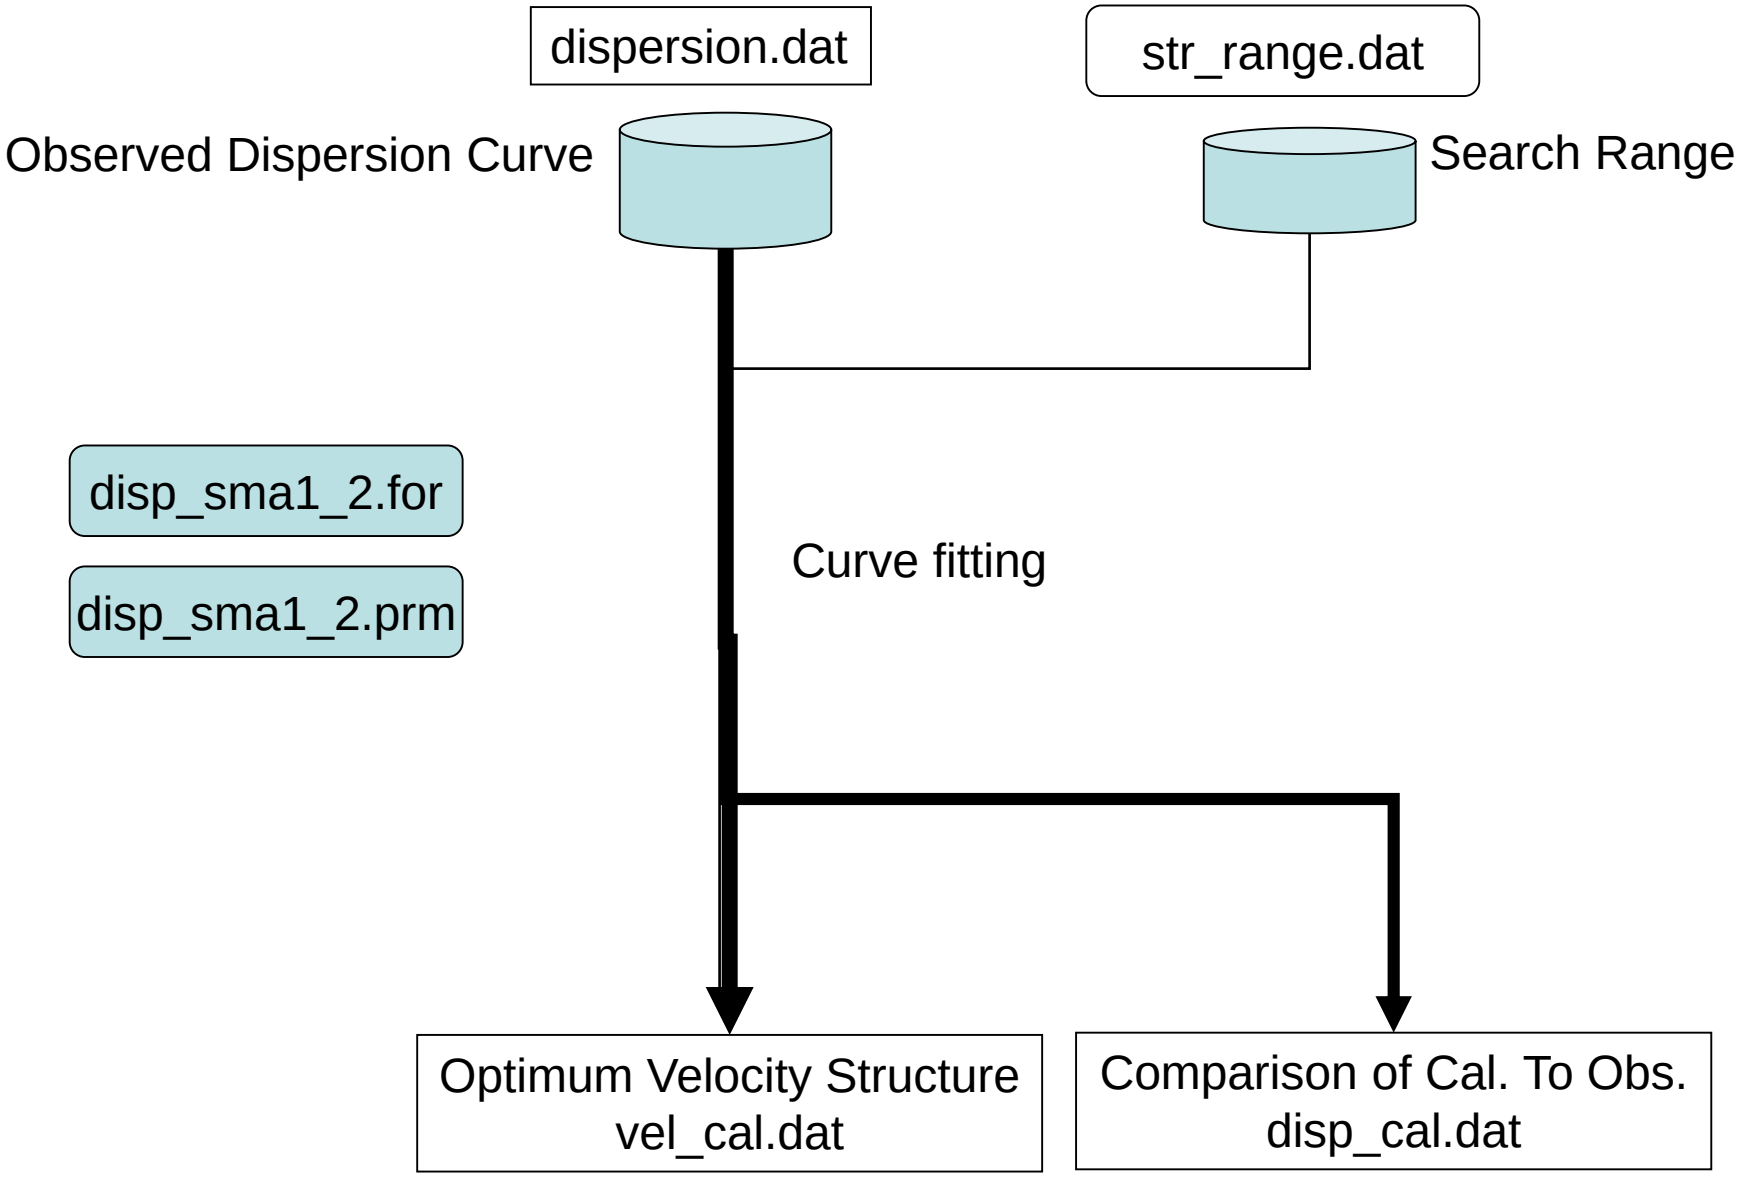
sh ./inversion.sh

Programs and parameter file used:

disp_sma1_2.for + disp_sma1_2.prm

inversion.sh:

```
#!/bin/sh
./disp_sma1_2.exe | tee ./cca_wkf/log/inversion.log
./inv_plt.exe | tee -a ./cca_wkf/log/inversion.log
gnuplot -e "load 'inv.plt' ; pause -1 "
rm ./cca_wkf/data/results/temp*.dat
```



dispersion.dat

vel_cal.dat
Comparison of Cal. To Obs.
disp_cal.dat

disp_sma1_1.for Yokoi(2006)

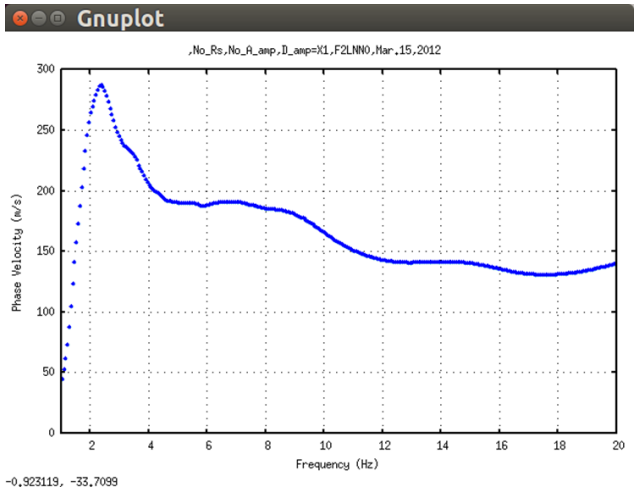
Combination of the Down Hill Simplex Method (Nelder & Mead (1965)) and the Very Fast Simulated Annealing method (Ingber, 1989).

DHSM: Down Hill Simplex Method (Nelder & Mead (1965))
An efficient algorithm to find "local minimum".
Faster than Geiger's method. Partial derivatives are not necessary.
Result is controlled by given initial values and easily captured by local minimum.
Example of application to the microtremor array: Ohori et al(2002)

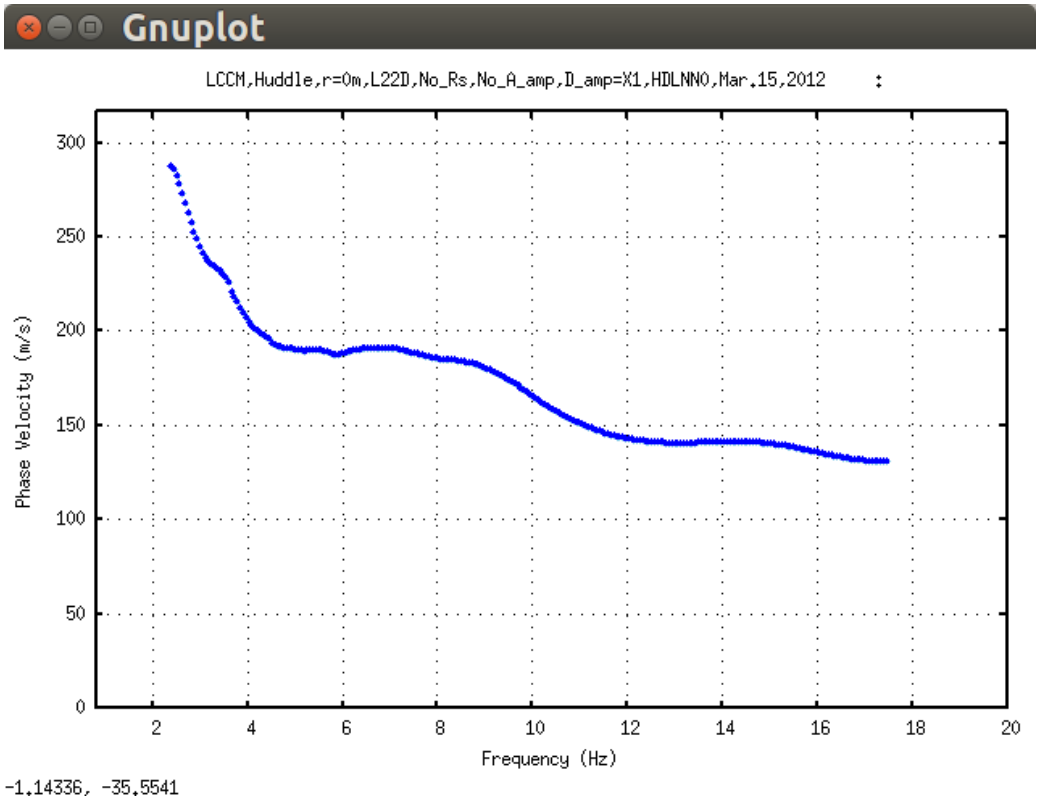
VFSA: Very Fast Simulated Annealing method (Ingber, 1989)
One of the heuristic search methods.
Analogy of cooling and crystallization process of metals.
Results can escape from local minimum and can get global minimum with some probability.
Time consuming due to the probabilistic search for each parameter.
Example of application to the microtremor array & appropriate values of parameters for this purpose: Yamanaka (2004)

Edit “dispersion.dat” using “gedit” or othrt text editor

(Example 1-6)



Then, redraw it using:
sh ./vel_model_plt.sh



Don’t leave blank line at the end of the edited “dispersion.dat”

Parameter file: disp_sma1_2.prm

(Example 1-6)

```
 1 1. 0.6 1.3 10000  5   :idum,t0,a,c,ntemp,j0
 0.0002                 :eps0
    1    1              :n_roh,n_vp
    1    0    1         :ini_flg,ndsp_flg,n_err
    0    1              :kflg,jflg
    0    0              :n_vs,n_th
str_range.dat           :File name for the initial velocity model (a25).
dispersion.dat          :File name for the obseved dispersion relation (a25).
vel_cal.dat             :File name for the estimated velocity structure (a25)
disp_cal.dat            :File name for the calculated dispersion relation (a25)
```

Explanation

Control parameter for the simulated annealing method

idum :Random seed (integer)
As the result may depend on the initial velocity model given by random number, it is strongly recommended for users to apply this program several times with various values of random seed and to grasp the scatter of result.

t0 :Initial Temperature

a,c :Coefficients for T=T0*exp(-c*k**a), where k is iteration number

ntemp :Maximum number of temparature change

j0 :Number of iteration for each temperature

threshold for conversion

eps0 : acceptable misfit.

Search Range file: str_range.dat

(Example 1-6)

```
LCCM,r=2m,L22D,F2LNN0,12/03/15:Model(a30)
         6                          :IL(I5),Layer Number
1.9     1.5    0.001  0.020  0.10 0.15 :density,Vp,hmin,hmax,vmin,vmax
1.9     1.5    0.001  0.020  0.12 0.20 :density,Vp,hmin,hmax,vmin,vmax
1.9     1.5    0.001  0.020  0.18 0.25 :density,Vp,hmin,hmax,vmin,vmax
1.9     1.5    0.001  0.020  0.15 0.30 :density,Vp,hmin,hmax,vmin,vmax
1.9     1.5    0.001  0.020  0.15 0.35 :density,Vp,hmin,hmax,vmin,vmax
2.0     1.70   998.0  999.0  0.20 0.50 :density,Vp,hmin,hmax,vmin,vmax
```

If n_vp=1 in parameter file, the given values of Vp are not used

If n_roh=1 in parameter file, the given values of density are not used

Execution (Example 1-6).

```
yokoi@ubuntu: ~/CCA2017/CCA2017

yokoi@ubuntu:~/CCA2017/CCA2017$ sh ./inversion.sh
 +------------------------------------------------+
 +                                                +
 +                   Disp_sma1                    +
 +                                                +
 + Program to obtain the optimum undeground velocity +
 + structure for the given dispersion relation of    +
 + Rayleigh wave.                                   +
 +                                                +
 + The used method is a combination of the down hill +
 + simplex method (Nelder & Mead (1965)) and the    +
 + very fast simulated annealing method (Ingber     +
 + (1989)).                                         +
 +                                                +
 + The subroutine DSPRAY and DSPMRX published in    +
 + "Seismological Algorithm" are used directly.     +
 + AMOEBA and AMOTRY published in "Numerical Recipe" +
 + are also used, but with significant modification  +
 + for the adaptation with the very fast simulated   +
 + annealing method.                                +
 +                                                +
 + By the combination with the down hill simplex    +
 + method, the very fast simulated annealing method  +
 + is gotten much faster.                           +
 +                                                +
 +                                    July 6, 2005+

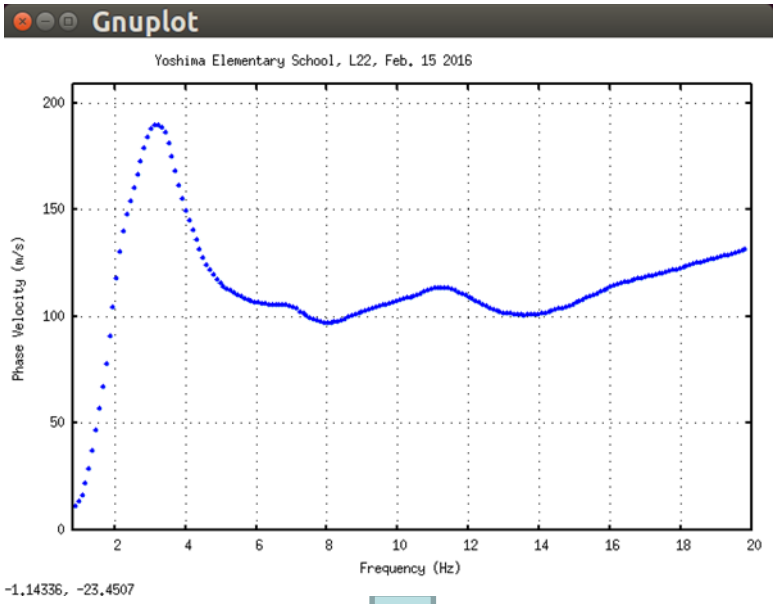
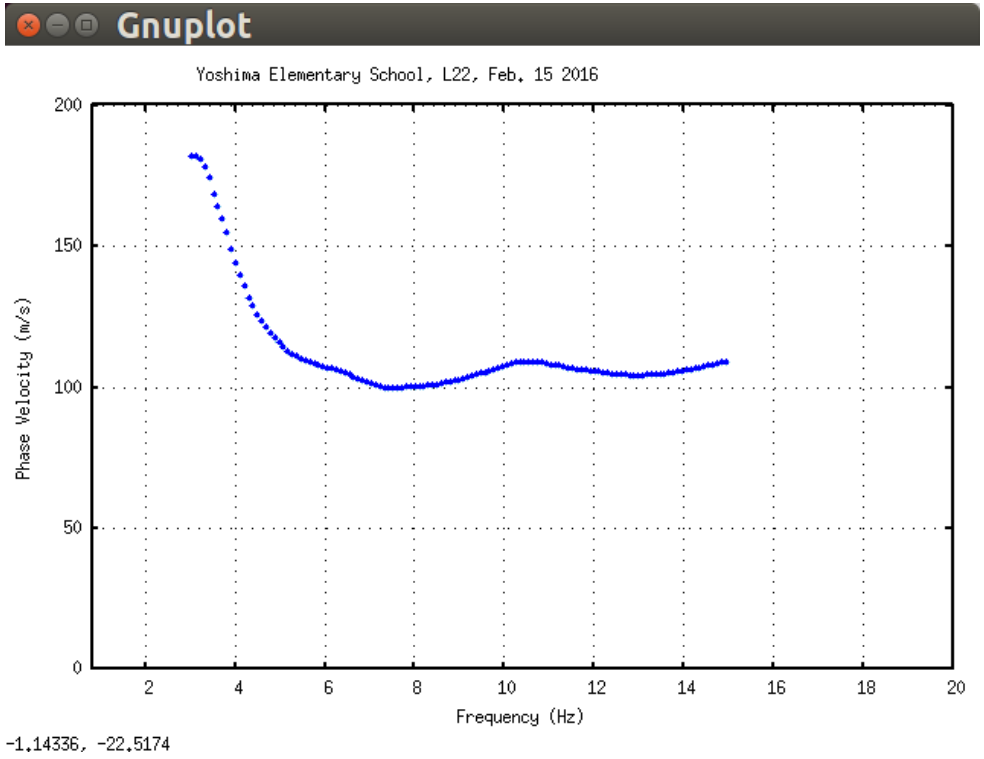
Edit “dispersion.dat” using “gedit” or othrt text editor



Then, redraw it using:
sh ./vel_model_plt.sh



Don’t leave blank line at the end of the edited “dispersion.dat”

inversion.sh: Execution

str_range.dat

```
yokoi@ubuntu: ~/CCA2017/CCA2017
yokoi@ubuntu:~/CCA2017/CCA2017$ sh ./inversion.sh
 +-------------------------------------------------+
 +                                                 +
 +                   Disp_sma1                     +
 +                                                 +
 + Program to obtain the optimum undeground velocity +
 + structure for the given dispersion relation of  +
 + Rayleigh wave.                                  +
 +                                                 +
 + The used method is a combination of the down hill +
 + simplex method (Nelder & Mead (1965)) and the   +
 + very fast simulated annealing method (Ingber    +
 + (1989)).                                        +
 +                                                 +
 + The subroutine DSPRAY and DSPMRX published in   +
 + "Seismological Algorithm" are used directly.    +
 + AMOEBA and AMOTRY published in "Numerical Recipe" +
 + are also used, but with significant modification +
 + for the adaptation with the very fast simulated  +
 + annealing method.                               +
 +                                                 +
 + By the combination with the down hill simplex   +
 + method, the very fast simulated annealing method +
 + is gotten much faster.                          +
 +                                                 +
 +                                  July 6, 2005+
