

Instruction

- Analysis of CCA Method -

Feb. 10, 2019

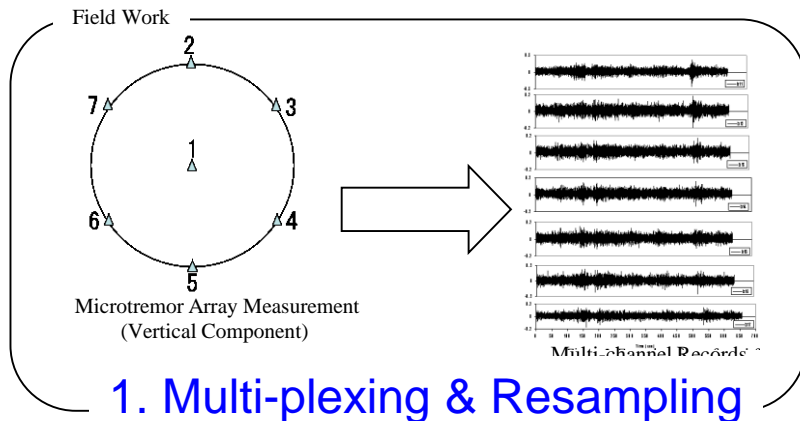

IISEE, BRI, Japan

By T. Yokoi

Acknowledgements:

The revision for the 2019 version was partly supported by Japan Science and Technology Agency (JST) and Japan International Cooperation Agency (JICA) under the “Science and Technology Research Partnership for Sustainable Development (SATREPS): Integrated Research on Great Earthquakes and Disaster Mitigation in Nepal Himalaya (FY2016-2020)”.

Procedures of analysis

Note: This version was developed on Linux: Ubuntu 18.04 LTS on VMWare Workstation Player 12.1.1 (build-3770994) on Windows10 Home 64bit (Build 14393) for 64bit PC, using **gfortran** compiler.

Operation on other OS may require additional revision or modification by users themselves.

Execution of commands is conducted as

./bin/executable_file_name.exe

or

sh shell_script_file_name.sh

If it is necessary to leave log file of execution

./bin/executable_file_name.exe 2>&1 | tee ./spacwkf/log/log_file_name.log

or

sh shell_script_file_name.sh 2>&1 | tee ./spacwkf/data/log/log_file_name.log

Folder Structure

Every necessary programs and files are stored under the folder “**CCA2019**”. The command operation must be conducted in the same folder, where shell script files are stored.

The source codes of the programs are stored in the subfolder “**source**”, document files including this instruction manual in “**doc**”, executable ones in “**bin**”.

The subfolder of work space “**cca_wkf**” contains the subfolder “**prn**” for parameter files that includes script files of GNU PLOT and the subfolder “**data**” for data files including graphic ones.

The compressed file “**ccawkf.tar.gz**” keeps subfolder structure of “**cca_wkf**” and all parameter files in “**cca_wkf/prn**”.

Note: GNUPLOT scripts files

Some files of GNUPLOT scripts are stored under the subfolder

“./cca_wkf/prm/gnuplt_scripts”

These can be loaded on GNUPLOT as **load** ‘????’

Some programs create the scripts of GNUPLOT that include the command

‘set terminal x11’ ,

This works on the GNUPLOT on Ubuntu and may be that on Windows.

If any problem on Windows, it is worth to try to replace it with

‘set terminal wxt’ .

Note: Executable files

The folder “CCA2019” includes several executable files. Their source code files are stored in the subfolder “./source”. Then, the following command is required to re-compile them if necessary. In the folder CCA2019, type in the following command.

```
gfortran ./source/???.for -o ./bin/???.exe
```

In case of problems caused by the incompatibility between Fortran77 and Fortran95,

```
gfortran -ff2c ./source/???.for -o ./bin/???.exe
```

Executable files are stored in the subfolder “CCA2019/bin”.

Note: Shell script files

The folder “CCA2019” includes several shell script files.

They are composed of few executing commands to reduce the typing tasks in data processing.

The following command can execute the shell script files.

```
sh shell_script_file_name.sh
```

or

```
sh ./shell_script_file_name.sh
```

As the contents of the shell script files contained in this program package are simple, they can work as batch files. However, it is necessary to activate batch files using the following.

```
chmod u+x shell_script_file_name.sh
```

For execution as a batch file,

```
./shell_script_file_name.sh
```

Note: Cleaning up the subfolders

- Use *sh clean_all.sh* in the folder “CCA2019” to delete all files of input data, interim outputs and results for a new processing task.
- Use *sh clean_sg2.sh* in the folder “CCA2019” to delete all input files of sg2 format.
- Use *sh clean_ls.sh* in the folder “CCA2019” to delete all input files of win format.

Note: Format of Data Files

- Basically, users themselves are responsible to convert the format of the input data files to one of those acceptable formats by this program package.
- The acceptable format is “*.cdm” described in the section “1. Resampling”.
- The following two format converters are provided:
 - sg2 (seg2 standard of IEEE)
→ ./cca_wkf/multiplexed_files/*.dat
 - Is (Win format of Hakusan-Kogyo)
→ ./cca_wkf/cdm_files/*.cdm

Data Processing

1. Multiplexing & Resampling

1.1 Format Conversion & Multiplexing

1.1.1 *seg2* standard format

1.1.2 *win* format for LS8800

1.2 Resampling & Screening

“sh ./resamplec.sh”

1.3 Plot Waveform:

“sh ./seewavc.sh”

1.4 Checking the selected time blocks

“sh ./seeblkc.sh”

2. Estimating Dispersion Curve

2.1 Calculation of CCA coefficient

“sh ./pwrhrs3.sh”

2.2 Plot Power, Fourier Spectra & Coherence

“sh ./spectra_all.sh”

2.3 Quality Control & Dispersion Curve

“sh ./results.sh”

3. Heuristic Search of Vs Structure

4. Re-arrange graphs (*in preparation*)

Note: Example1

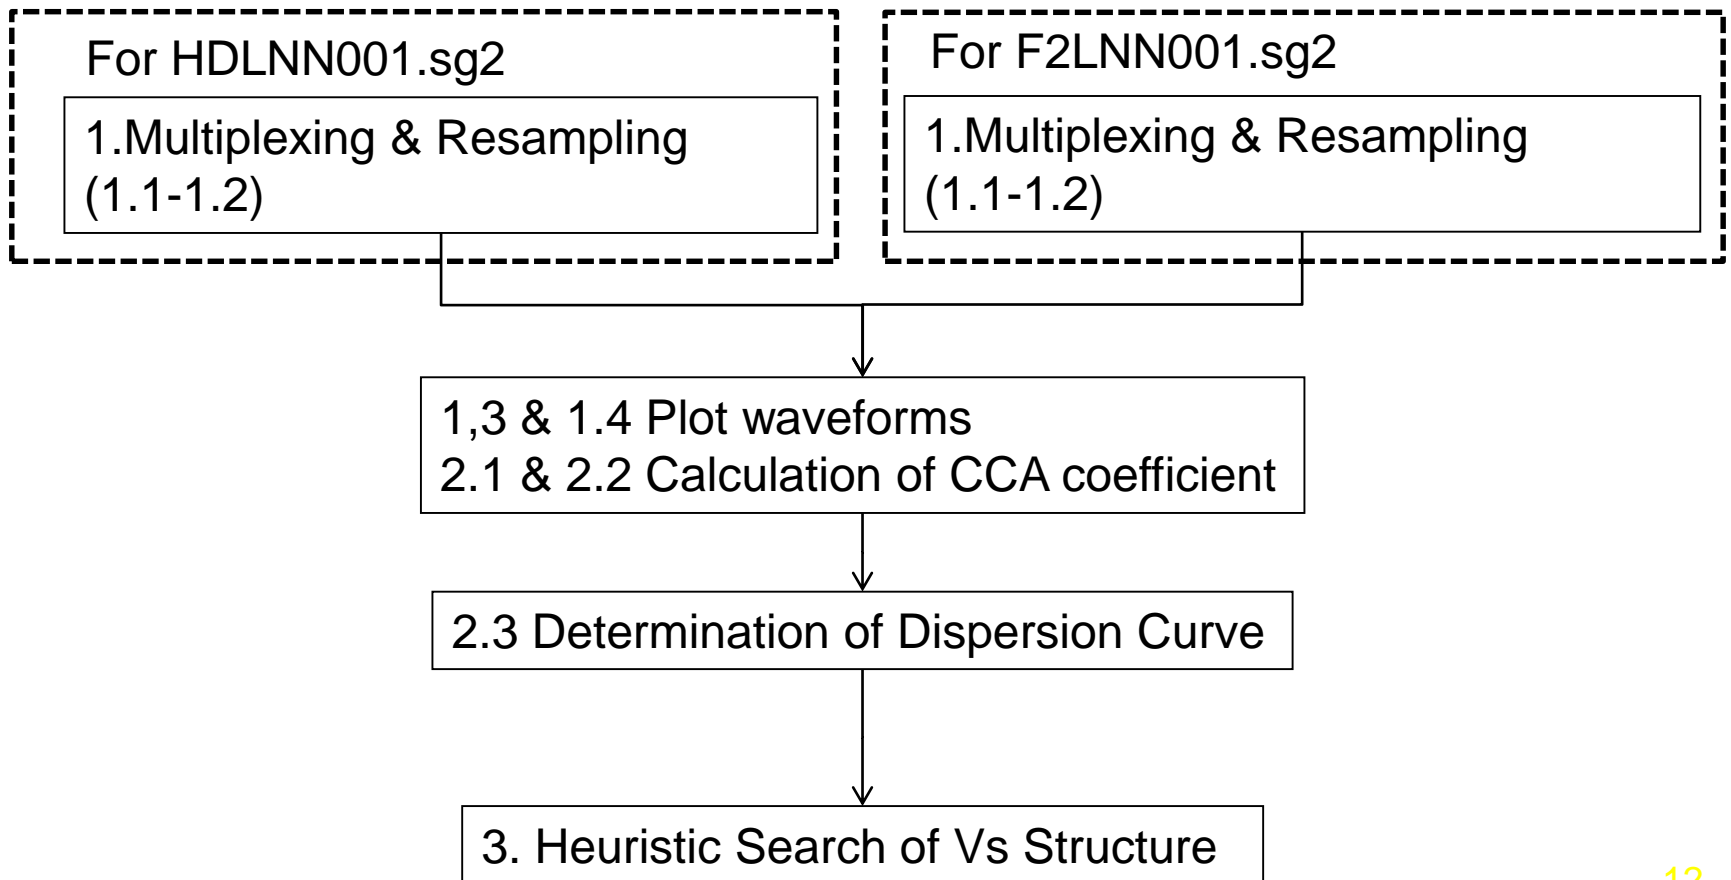

(Instrumental Correction without sensor at the center)

Example with two data sets:

HDLNN001.sg2: Huddle test data file

F2LNN001.sg2: 6 points circular array without one at the center

Both are the seg2 standard format file.

1. Multiplexing & Resampling

1.1 Format conversion & Multiplexing

1.1.1 *seg2* standard format)

Shell Script used:

```
sh ./seg2read.sh
```

Program and parameter file used:

```
./bin/seg2read.exe +./cca_wkf/prm/seg2read.prm
```

seg2read.exe is prepared for the field data files of *seg2* standard format.

Terminology

Multiplexing:

To sort the data individually stored in single channel files into a multi-channel file of the time-sequential format.

Here, *seg2* standard (multiplexed binary) format (IEEE) is explained.

The expected input files of *seg2* format are, for example, those obtained in the field using multi-channel data logger designed for the exploration geophysics.

seg2read.exe

- + Convert data format from *seg2* standard format (binary & multi-channel) in the sub-folder “*cca_wkf/data/sg2_files*” to *cdm* format (ascii text, multi-channel),
- + Channel pivoting and extraction
- + Store the output files into “*cca_wkf/data/multiplexed_files*”

First: Copy all the seg2 format files to be converted into the sub-folder "cca_wkf/data/sg2_files".

Example:

```
seg2read.sh:
```

```
#!/bin/sh -x
cd cca_wkf/data/sg2_files
ls *.sg2 > sg2file.lst
cd ../../..
./bin/seg2read.exe | tee
cca_wkf/log/seg2read.log
cd cca_wkf/data/multiplexed_files
ls *.dat > mltfile.lst
cd ../../..
./bin/mk_title.exe
```

Shell script executes "ls *.sg2 > sg2file.lst" in this sub-folder and existing sg2 files are listed in the newly created file "sg2file.lst".

All the files listed in it that have the extension specified in the 3rd line of the parameter file "seg2read.prm".

Finally, the first line of "seg2read.prm" is copied to "graph_title.txt" in the subfolder "./cca_wkf/prm".

Example: seg2read.prm

All the files listed in "sg2file.lst" that have the extension specified in the 3rd line are converted to the output files that have the extension given in the 4th line.

Edit the file "sg2file.lst" using "gedit" or other text editor if necessary.

seg2read.prm

```
LCCM,Field,r=2m,L22D,No_Rs,No_A_amp,D_amp=X1,F2LNN0,Mar.15,2012      :comm(a70)
5.E-3      : scaling factor (for output files in mkine(1.e-3cm/s))
sg2        : extension of input seg2 format files(a3)
dat        : extension of output ascii text files(a3)
0 3 0.1 1.0 1.5  :nfilter(=1:apply),nchara=3:bandpass),f1,fh,fs
pvlist 1 2 3 4 5 6  : Channel Pivoting
```

The array used in the field has 6 sensors, but none of them at the center. They were installed counter-clockwise order. Then, pvlist 1 2 3 4 5 6 :

Explanation: seg2read.prm

All the files listed in "sg2file.lst" that have the extension specified in the 3rd line are converted to the output files that have the extension given in the 4th line.

Edit the file "sg2file.lst" using "gedit" or other text editor if necessary.

seg2read.prm

1st line : comment (a70)

2nd line : scaling factor (use the value that makes the unit of the output files "mkine" (1.e-3 cm/s))

3rd line : extension of input seg2 format files(a3)

4th line : extension of output ascii text files(a3) → Fix it ".dat"

5th line : nfilter(=0:pass, =1:apply, =2:DC & Trend removal),
ncharacter(=2:lowpass,=3:bandpass),f1,fh,fs

6th line : Channel Pivoting

'normal' : no pivoting, all channel used

'rev_al' : all channel used but in reversed order

'rev_fh' : all channel used but former half in reversed order

'rev_lh' : all channel used but latter half in reversed order

'pvlist' 2 1 3 4 6 23 24 : Pivoting list.

Examples of the 6th line of seg2read.prm

Use all channels without pivoting:

```
normal      : Channel Pivoting
```

Use all channels but reversed order:

```
reverse     : Channel Pivoting
```

Use the first 7 channels of the input files without changing order:

```
pvlist 1 2 3 4 5 6 7 : Channel Pivoting
```

The same as above but 7th channel moved to the first:

```
pvlist 7 1 2 3 4 5 6 : Channel Pivoting
```

Use only odd numbered channels among 24 without changing order:

```
pvlist 1 3 5 7 9 11 13 15 17 19 21 23 : Channel Pivoting
```

Note: Be sure to put ' '(blank) before ':'(colon), otherwise the program can have an error in detecting the end of line.

If a sensor is located at the center of the circler array and used for incoherent noise correction, the corresponding data must be assigned to ch-1. Then, other channels must be listed following the order counter clock wise. The value of the azimuth of the first peripheral sensor must be given to the parameter ph00 and the in-coming azimuth of the pre-dominant wave is calculated.

“pvlist” can be used to change the channel order.

Format of output files

in `./cca_wkf/data/multiplexed_files`:

Users who use single channel recorders or data loggers must multiplex the record files in the following format by themselves.

```
6 0.0080      0.5500E-01  225000  mkine
LCCM,Field,r=2m,L22D,No_Rs,No_A_amp,D_amp=X1,F2LNN0,Mar.15,2012      :
0.000000  0.5280000E+01  0.3795000E+01  0.6710000E+01 ...
0.008000  0.9900000E+00  0.2310000E+01 -0.7975000E+01 ...
0.016000  0.6050000E+01  0.1138500E+02 -0.1061500E+02 ...
0.024000  0.3025000E+01  0.7535000E+01 -0.1017500E+02 ...
...
```

1st line: Number of channels, Δt (sec), scale, number of samples, unit

2nd line: Comment (less than 50 characters)

3rd line: Time, 1st-ch sample, 2nd-ch sample, 3rd-ch sample,

In the next step (resamplec.for reads this file as follows)

```
read(1,*)nch00,dt00,scale00,ndata00,cunit
```

```
...
```

```
read(1,'(a50)')comment
```

```
...
```

```
read(1,*,end=10) xdum,(x(i,j),j=1,nch)
```

Warning!

seg2read.exe can handle less than or equal to 25 channels and less than or equal to 500,000 samples in every channel.

Exceedance may result in a significant error.

It is recommendable to split the input data file if too long, for example, into several files of 1 hour or 30 minutes data.

Ref:

500,000 samples correspond to 1.38 hours for 100 Hz sampling,

1.11 hours for 125 Hz sampling,

41.6 minutes for 200 Hz

sampling,

33.3 minutes for 250 Hz sampling

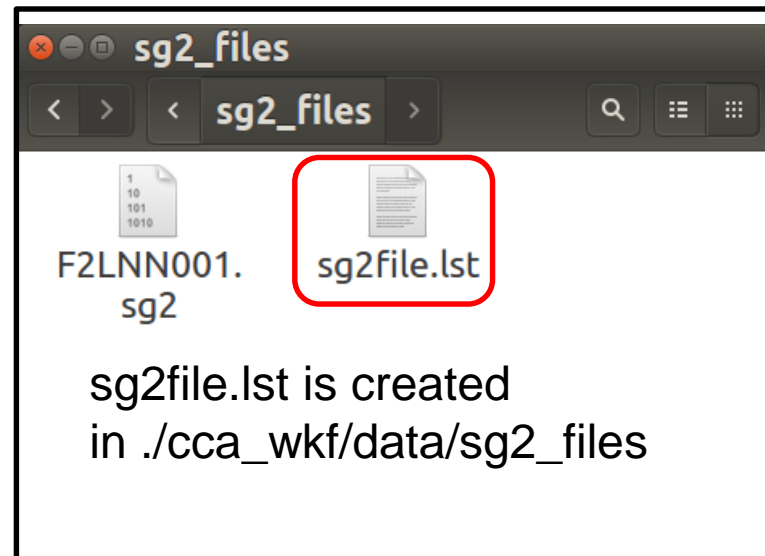

16.6 minutes for 500 Hz

sampling.

```
yokoi@ubuntu:~/CCA2017/CCA2019$ sh seg2read.sh
./cca_wkf/prm/seg2read.prm

LCCM,Field,r=2m,L22D,No_Rs,No_A_amp,D_amp=X1,F2LNN0,Mar.15,2012 :
2 files have been converted.
Normal End.
```

Input file is ./cca_wkf/data/sg2_files/F2LNN001.sg2

Multiplexed output is ./cca_wkf/data/multiplexed_files/F2LNN001.dat & another.

Log file is stored in 'cca_wkf/log/seg2read.log'

Note: The converted files are already multiplexed and stored in the subfolder “./cca_wkf/data/multiplexed_files” with the extension “.dat”. For these files, the next step is resampling.

1. Multiplexing & Resampling

1.1 Format conversion & Multiplexing

1.1.2 *win* format for LS8800

This is the example of individually recorded data using a tri-axial sensor at each observation point.

Format conversion & Multiplexing must be done by the users prior to the analysis for the case of individual recording at each site.

Here *win* format is explained as an example. The *win* format data files are created, e.g., LS8800 of Hakusan Kogyo.

The multiplexed files must be written in a format that is readable in the next step: resampling.

As it is impossible to cover all existing formats in the world, it is strongly recommended to make their own program for format conversion.

Format conversion is conducted using

sh lstocdm2.sh

in the folder “CCA2019”.

Note: Usage of 4 **seismographs** in a site is assumed.

Preparation:

1) Edit the parameter file “**prm_maker.prm**”

```
Sitename_      : site name (a9)
 4  3          : numbers of obs_ponts and channels
30             : duration of each connected file in min.(integer)
17120516.45    : first file name (yymmddhh.mm)
 4            : number of output connected files
```

2) Copy the data files (binary) of LS8800 into the subfolders of

“cca_wkf/data/ls_files” as follows:

“no1” ← files from seismograph No.1

“no2” ← files from seismograph No.2

“no3” ← files from seismograph No.3

“no4” ← files from seismograph No.4

Istocdm2.sh

```
#!/bin/sh
./bin/prm_maker.exe | tee cca_wkf/log/prm_maker.log
./bin/lstocdm2.exe | tee cca_wkf/log/lstocdm2.log
cd ./cca_wkf/data/cdm_files
rm *.cdm
cd ../../..
mv ./cca_wkf/data/ls_files/Combined_Data/*.cdm ./cca_wkf/data/cdm_files
```

Execution:

./bin/prm_maker.exe

➔ “lstocdm2.prm” is created in “cca_wkf/prm”.

./bin/lstocdm2.exe

➔ All converted and separated files are stored in
“./cca_wkf/data/ls_files/Combined_Data”.

All converted and separated files are automatically stored in
“cca_wkf/data/ls_files/Combined_Data”.

Then, the subfolder “./cca_wkf/data/cdm_files” is cleaned.

Finally, by the command “mv” at the last line all of the cdm files are moved from
“./cca_wkf/data/ls_files/Combined_Data” to “./cca_wkf/data/cdm_files”.

Example: prm_maker.prm

```
Open ▾ [icon] prm_maker.prm Save [icon] [icon] [icon]
~/CCA2017/CCA2019/cca_wkf/prm
1 Testcase_      : site name (a9)
2 4 3           : numbers of obs_ponts and channels
3 30            : duration of each connected file in min.(integer)
4 17120516.45   : first file name (yymmddhh.mm)
5 4             : number of output connected files
```

Istocdm2.prm: automatically created by Istocdm2.sh

```

8	00:00:00.080	-0.8611901E+00

The created single channel file by this format conversion program will be read in the next step using “multipx6.exe” as follows.

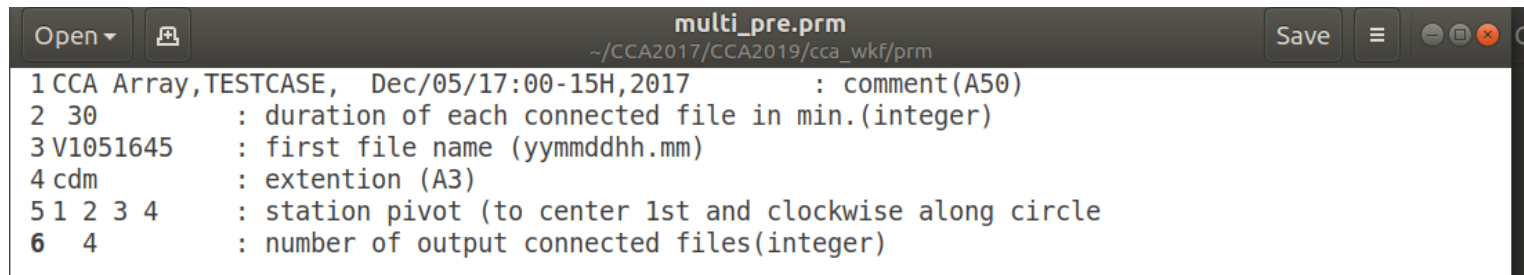

“multipx6.for”

```
character cline(3)*80,cdum*13,cdummy*8    ! Declare three
                                           ! character strings
.....
do i=1,3
  read(1,'(a80)')cline(i)    ! Read 3 lines header
enddo
do i=1,nst0-1
  read(1,*)cdummy           ! Skip first nst0 sec data
enddo
do i=1,ndur0
c read input data
  read(1,*,end=10)cdummy,cdum,x dum
  x(i,j)=x dum/scale
enddo
10  ndur0=i-1                ! Adjust number of samples
.....
```

Character strings cline(3) are not used further. Neither cdummy nor cdum.

Preparation for Multiplexing

- In the next step, *multipx6.exe* is used with its parameter file “*multipx6.prm*”.
- For automatic editing of *multipx6.prm*, the program *multi_pre.exe* is prepared.
- Edit the following “*multi_pre.prm*” in “*cca_wkf/prm*” and run “*sh multi_pre.sh*”.

```
multi_pre.prm
~/CCA2017/CCA2019/cca_wkf/prm
1 CCA Array,TESTCASE, Dec/05/17:00-15H,2017      : comment(A50)
2 30      : duration of each connected file in min.(integer)
3 V1051645 : first file name (yymmddhh.mm)
4 cdm     : extention (A3)
5 1 2 3 4 : station pivot (to center 1st and clockwise along circle
6 4      : number of output connected files(integer)
```

- 1st line: Comment but later used as the title of all graphs showing the results of analysis.
- 2nd line: Duration of connected files same as the 3rd line of “*prm_maker.prm*”.
- 3rd line: The earliest file name for the 1st position (A8)
- 4th line: Extension of the name of files in the folder “*cdm_files*”, i.e., *cdm*.
- 5th line: Station pivoting list.
- 6th line: Number of connected files same as the 5th line of “*prm_maker.prm*”.

Execution

```
yokoi@ubuntu:~/CCA2017/CCA2019$ sh multi_pre.sh
Working Folder=./cca_wkf/prm/
Default Settings:
  dt      = 0.0
  np      = 4
  tst     = 0.0
  file_out=CC** .dat

V1051645 V2051645 V3051645 V4051645
V1051715 V2051715 V3051715 V4051715
V1051745 V2051745 V3051745 V4051745
```

Automatically created multipx6.prm which will be used in the next step.

```
1 1 : Number of cases
2 : This blank is necessary
3 4 0.010 : Number of obs points,dt
4 0.0 1800.0 : tst,tdur(sec)

2 CC       : n_out(A12),cout ("**.dat" is attached)
CCA Array,TESTCASE, Dec/05/17:00-15H,2017 : comment(A50)
4           8         : number of measurement in the same array configuration,n_chara
V1051645 V2051645 V3051645 V4051645 ← 1st
...                                     Input filelist

```

Input file names : V1051645.cdm

consist of the character string 'V1051645' of 8 characters plus another character string '.cdm' of 4 characters. These character strings and their number of characters are indicated in the 7th line for the latter and the 11th line and below for the former. Program 'multipx6.exe' automatically combines them and read the data from the files.

Don't leave a blank line at the end of input filelist

Output file name: CC01.dat for the 1st measurement. '01' shows the numbering of measurement.

...

CH04.dat for the 4th measurement. '04' shows the numbering of measurement.

These output file names consist of the character string 'CH' of 2 characters as indicated in the 8th line. The following two integers show the numbering of measurement. '.dat' is attached to all automatically.

The data from tst to tst+tdur are processed in every files.

Values read from the input files are divided by the scale factor given in the 5th line. **This value must be selected to make the unit of data in the output file is 'mkine', i.e., 1.0E-5 M/sec for ground velocity. For ground acceleration 'gal', i.e., 1.0E-2 M/sec² should be used.** Otherwise the amplitudes of the data will be erroneously shown in the output figures.

Execution:

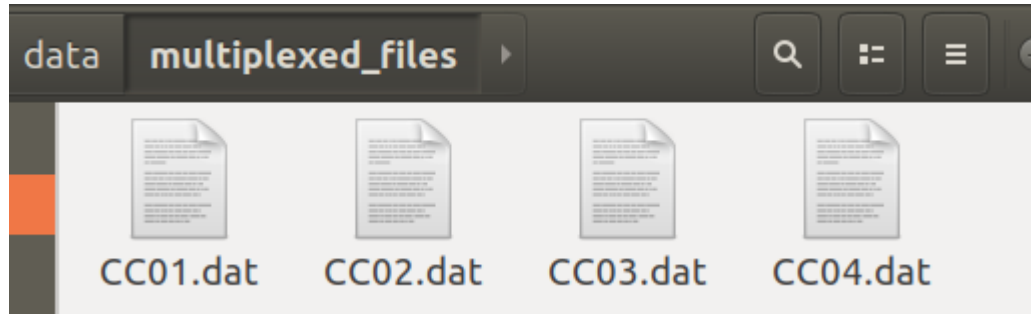

sh multipx6.sh

```
yokoi@ubuntu:~/CCA2017/CCA2019$ sh multipx6.sh
Working Folder=./cca_wkf/prm/
Nch=          4 dt=  9.99999978E-03
Scale Factor=  1.00000000
Does this scale convert the unit of data mkinе ?
Please change the value if not.
      0          3  0.100000001      1.00000000      1.50000000

```

ch_pivot.exe

This program is provided for changing the order of channels in a group of already multiplexed files, for example, those copied from the data processing of SPAC method.

Edit the parameter file “ch_pivot.prm” in “./cca_wkf/prm”

ch_pivot.prm

```
4           : channel number → How many channels the file has  
4 1 2 3     : pivot list
```

Execute

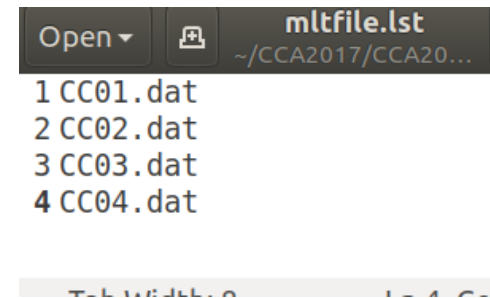

```
sh ch_pivot.sh
```

Then, all files listed in “./cca_wkf/multiplexed_files/mltfile.lst” are processed.

The pivoted files’s name has “r” at the top.

ch_pivot.sh

```
#!/bin/sh  
cd ./cca_wkf/data/multiplexed_files  
ls *.dat > mltfile.lst  
cd ../../..  
./bin/ch_pivot.exe
```

1.2 Resampling & Screening

Shell Script used

sh resamplec.sh

Program and parameter file used:

./bin/resamplec.exe +./cca_wkf/prm/resamplec.prm

Terminology

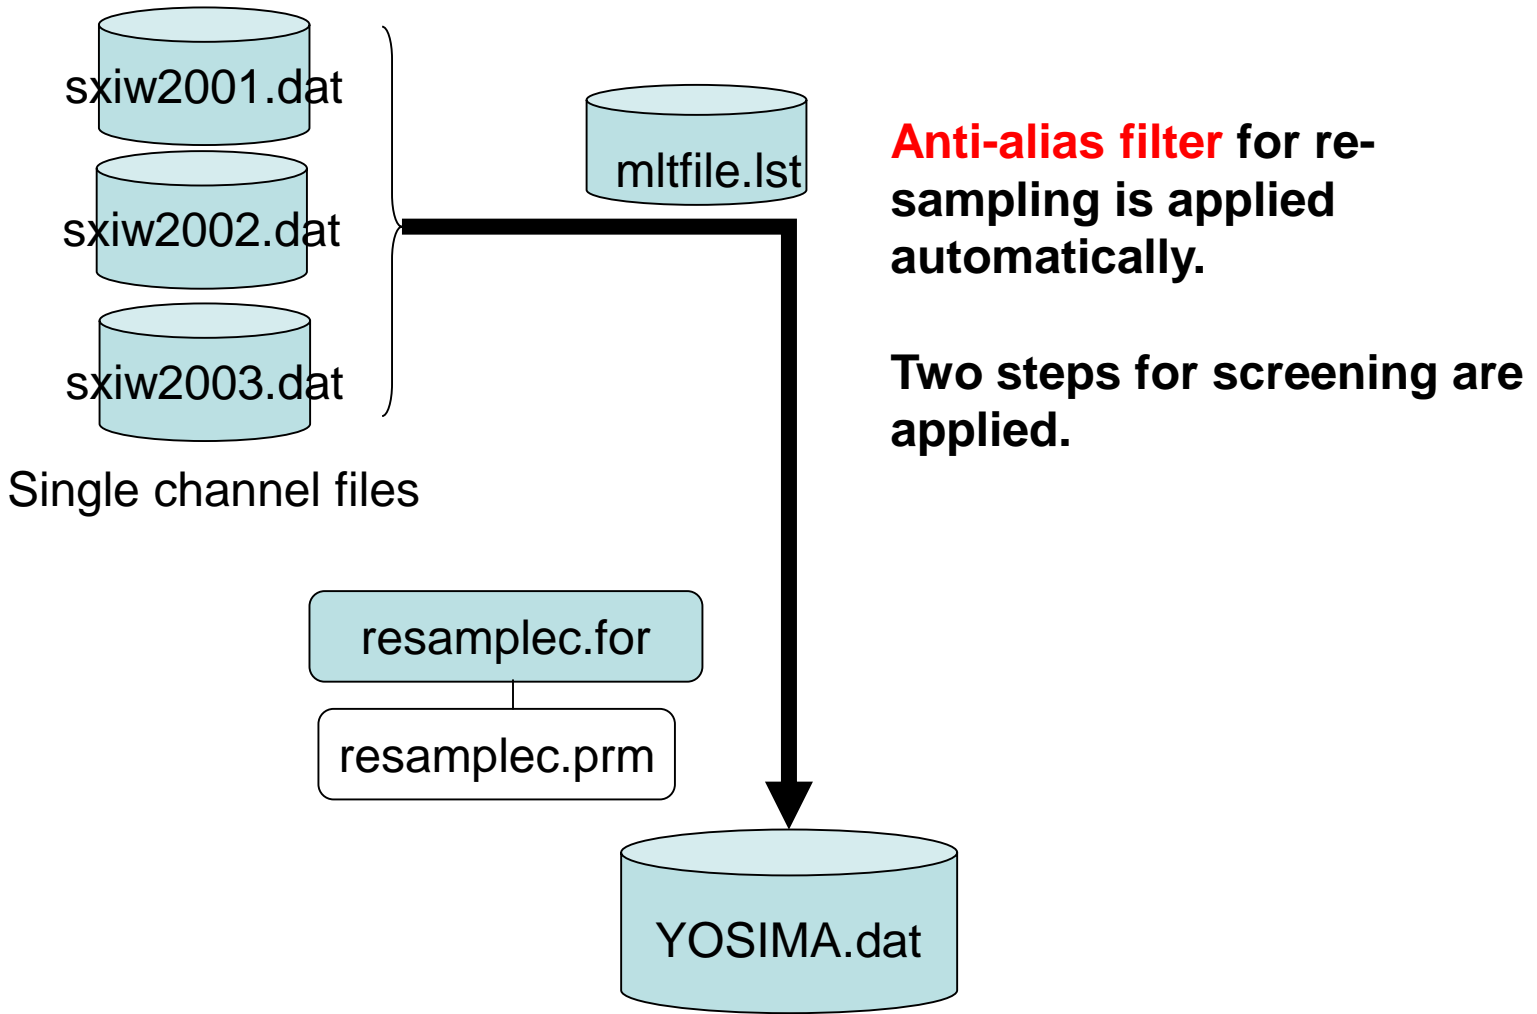

Re-sampling:

It can be done to thin the data out in order to reduce the size of data files and the load to PC for processing. This can cause the aliasing effect. Then, it is necessary to apply the digital anti-alias filter that has high cut characteristics before thinning out.

Note: Modify the file “./cca_wkf/prm/graph_title.txt”, if you have not started the processing from “*sh seg2read.sh*”. This means that your original data files are not seg2 format.

The contents of the file “./cca_wkf/prm/graph_title.txt” is used for the title of various graphs produced in further processing. It is recommendable to give an appropriate title to the figures to prevent potential confusion.

Multi-channel data files from the same array configuration

Resampled & screened multi-channel & multi-measurement data file

Screening: Step-1

Parameter: *ajudge*

If the maximum amplitude in a time block exceeds the product of “*ajudge*” to RMS amplitude of the same time block, this time block is not used in analysis.

This is a countermeasure against impulsive noise due to traffic, i. e., vehicles passing near by seismometers.

The bigger value of “*ajudge*” means looser screening. The smaller value means fewer available time blocks.

Screening: Step-2

Parameter: a_sgm

If the RMS amplitude in a time block deviates more than $a_sgm \times$ the standard deviation from the average, this time block is not used in analysis, where the average and the standard deviation are calculated over the all time blocks that survived in the screening step-1.

This is a countermeasure against outliers.

The bigger value of “a_sgm” means looser screening. The smaller value means fewer available time blocks.

```
resamplc.sh:
```

```
#!/bin/sh -x  
cd ./cca_wkf/data/multiplexed_files  
ls *.dat > mlfile.lst  
cd ../../..  
./bin/resamplec.exe | tee cca_wkf/log/resamplec.log
```

Example of resamplec.prm:

```
6 0.008 2 0.0 0 2.0 :nch,dt,nchannel,dt,nskip,ph0,ncenter,radius  
5.0 3.0 :ajudge,a_sgm  
0.0 1800.0 :tst,tdur  
F2LNN1.dat :output file name  
1024 :number of data in one time block after resampling
```

where

nskip: skip number for resampling (1: no resampling, 2: resample at every two samples)

ph0: azimuth from the center(1ch) to 2ch

ncenter: 0 (no sensor at the center) or 1 (1ch at the center) , cannot be bigger than 2

radius: radius of circular array (m)

tst: start time of analysis (sec)

tdur: duration of time window for analysis (sec)

Execution:

```
yokoi@ubuntu:~/CCA2017/CCA2019$ sh resamplec.sh
./cca_wkf/prm/resamplec.prm
Working Folder=./cca_wkf/prm/
Band-Pass:fl= 0.100fh= 25.312

		1			16.3840	0.5473618E+01	0.3885463E+01	0.6374265E+01	0.4033590E+01	-0.3046133E+01	0.5571502E+00		
		...											

The file include mmblok=120 time blocks of nch=6 channel data. Each time block is composed of nblk=1024 data.

Each line corresponds to a time step. The format used to store each line is cform3='(i8,f16.4, 7e15.7)'.

Unit of data is 'mkine' (=1.0e-3 cm/sec)

These parameters are stored in the 1st line.

As all of the data are delimited by space, this file can be read using free format.

Note: For the data of huddle test, it is necessary to change the value of the 6th parameter of the first line of the resamples files to "0.0" .

1. Multiplexing & Resampling

1.3 Plot Waveform

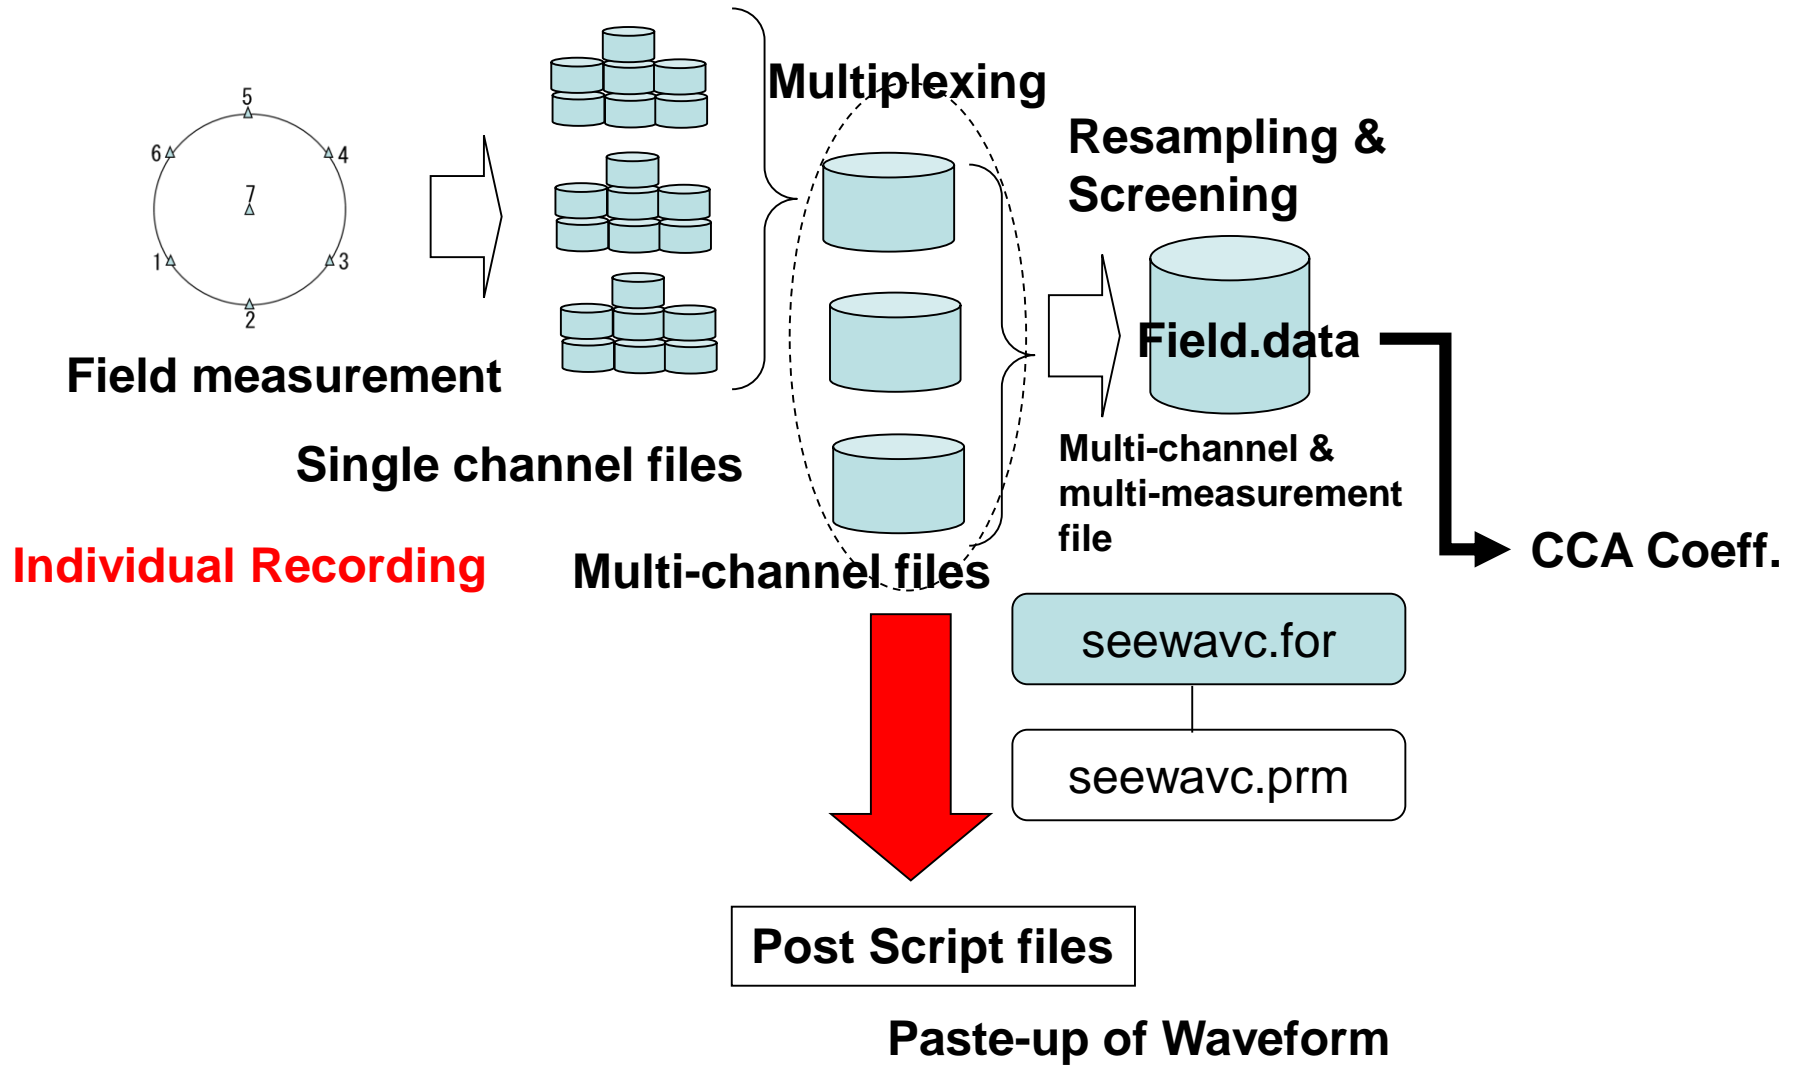

Shell Script used:

```
sh seewavc.sh
```

Program and parameter file used:

```
./bin/seewavc.exe +./cca_wkf/prm/seewavc.prm
```

Flow of the data processing for the conventional CCA

Multi-channel file: F2LNN001.dat

```
6 0.0080 0.5000E-02 225000 mkine

./cca_wkf/data/results/fig_wave/HDLNN001.ps
HDLNN001.dat 1-st page
```

mltfile.lst is newly created.

Waveforms are plotted in PostScript files.
Log file is stored in “./cca_wkf/log/seewavc.log”

1. Multiplexing & Resampling

1.4 Check the selected time blocks

Shell Script used

sh seeblkc.sh

Program and parameter file used:

./bin/seeblkc.for +./cca_wkf/prm/seeblkc.prm

```
seeblkc.sh
```

```
#!/bin/sh -x
```

```
cd ./cca_wkf/data/resampled_files
```

```
ls *.dat > rsmfile.lst
```

```
cd ../../..
```

```
./bin/seeblkc.exe | tee cca_wkf/log/seeblkc.log
```

Parameter file:

```
./cca_wkf/prm/seeblkc.prm
```

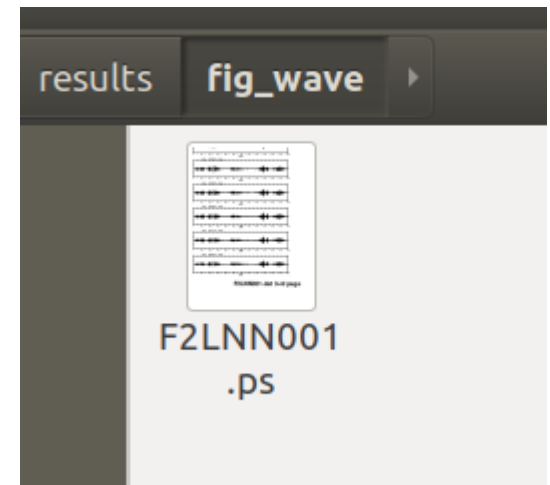

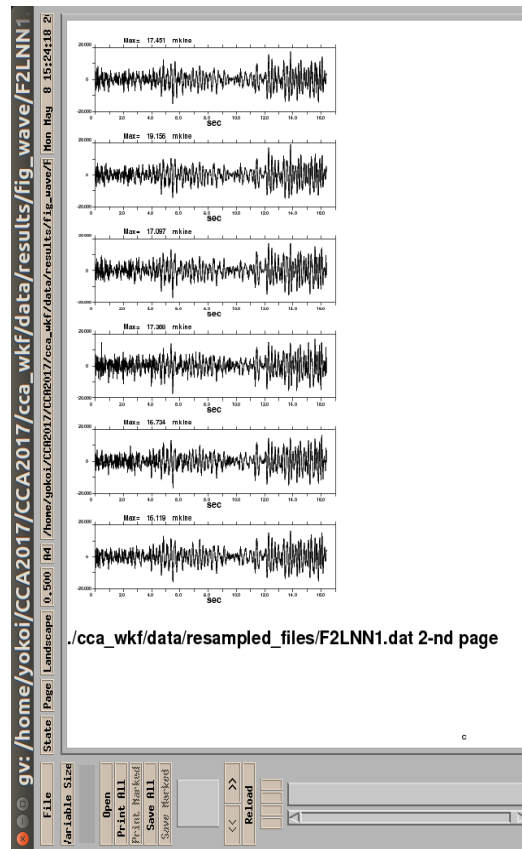

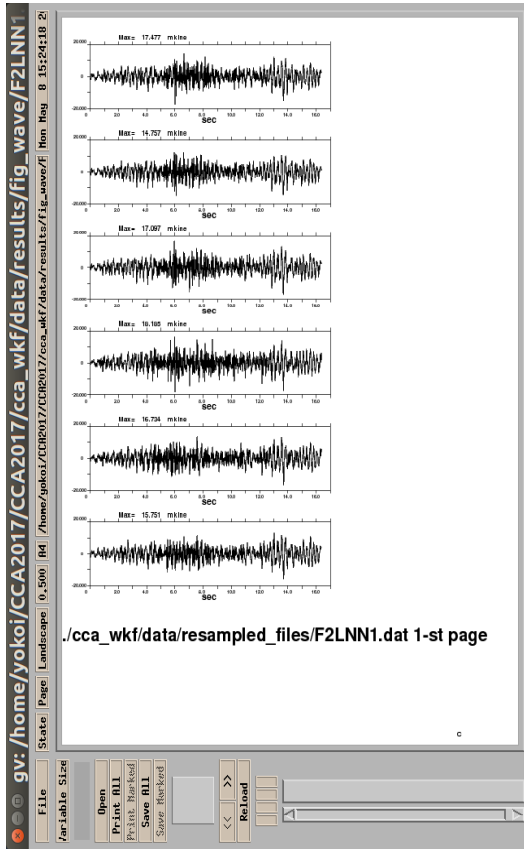

```
0 0.1 1.0 1.5 3 :nfilter,fl,fh,fs,nchara(=2:lowpass, =3:bandpass)
```

Execution

```
yokoi@ubuntu:~/CCA2017/CCA2019$ sh seeblkc.sh
./cca_wkf/data/resampled_files/rsmfile.lst
./cca_wkf/prm/seeblkc.prm
./cca_wkf/data/resampled_files/F2LNN1.dat
6 120 1024 0 0.00 2.00 (i8,f16.4, 6e15.7) mkine
./cca_wkf/data/results/fig_wave/F2LNN1.ps
```

Multi-page postscript files are created in
./cca_wkf/data/results/fig_wave
Log file is stored in ./cca_wkf/log/seebkbc.log

PostScript File

Multi-page postscript files are created in ./cca_wkf/data/results/fig_wave

2. Estimating Dispersion Curve

2.1 Calculation of CCA coefficient

Shell Script used

```
sh pwrcrs3.sh
```

Program and parameter file used:

```
./bin/pwrcrs3.exe +./ccawkf/prm/pwrcrs3.prm
```

Terminology

Huddle test:

Common input motion recording to determine the difference of the system characteristics among the recording system and/or channels.

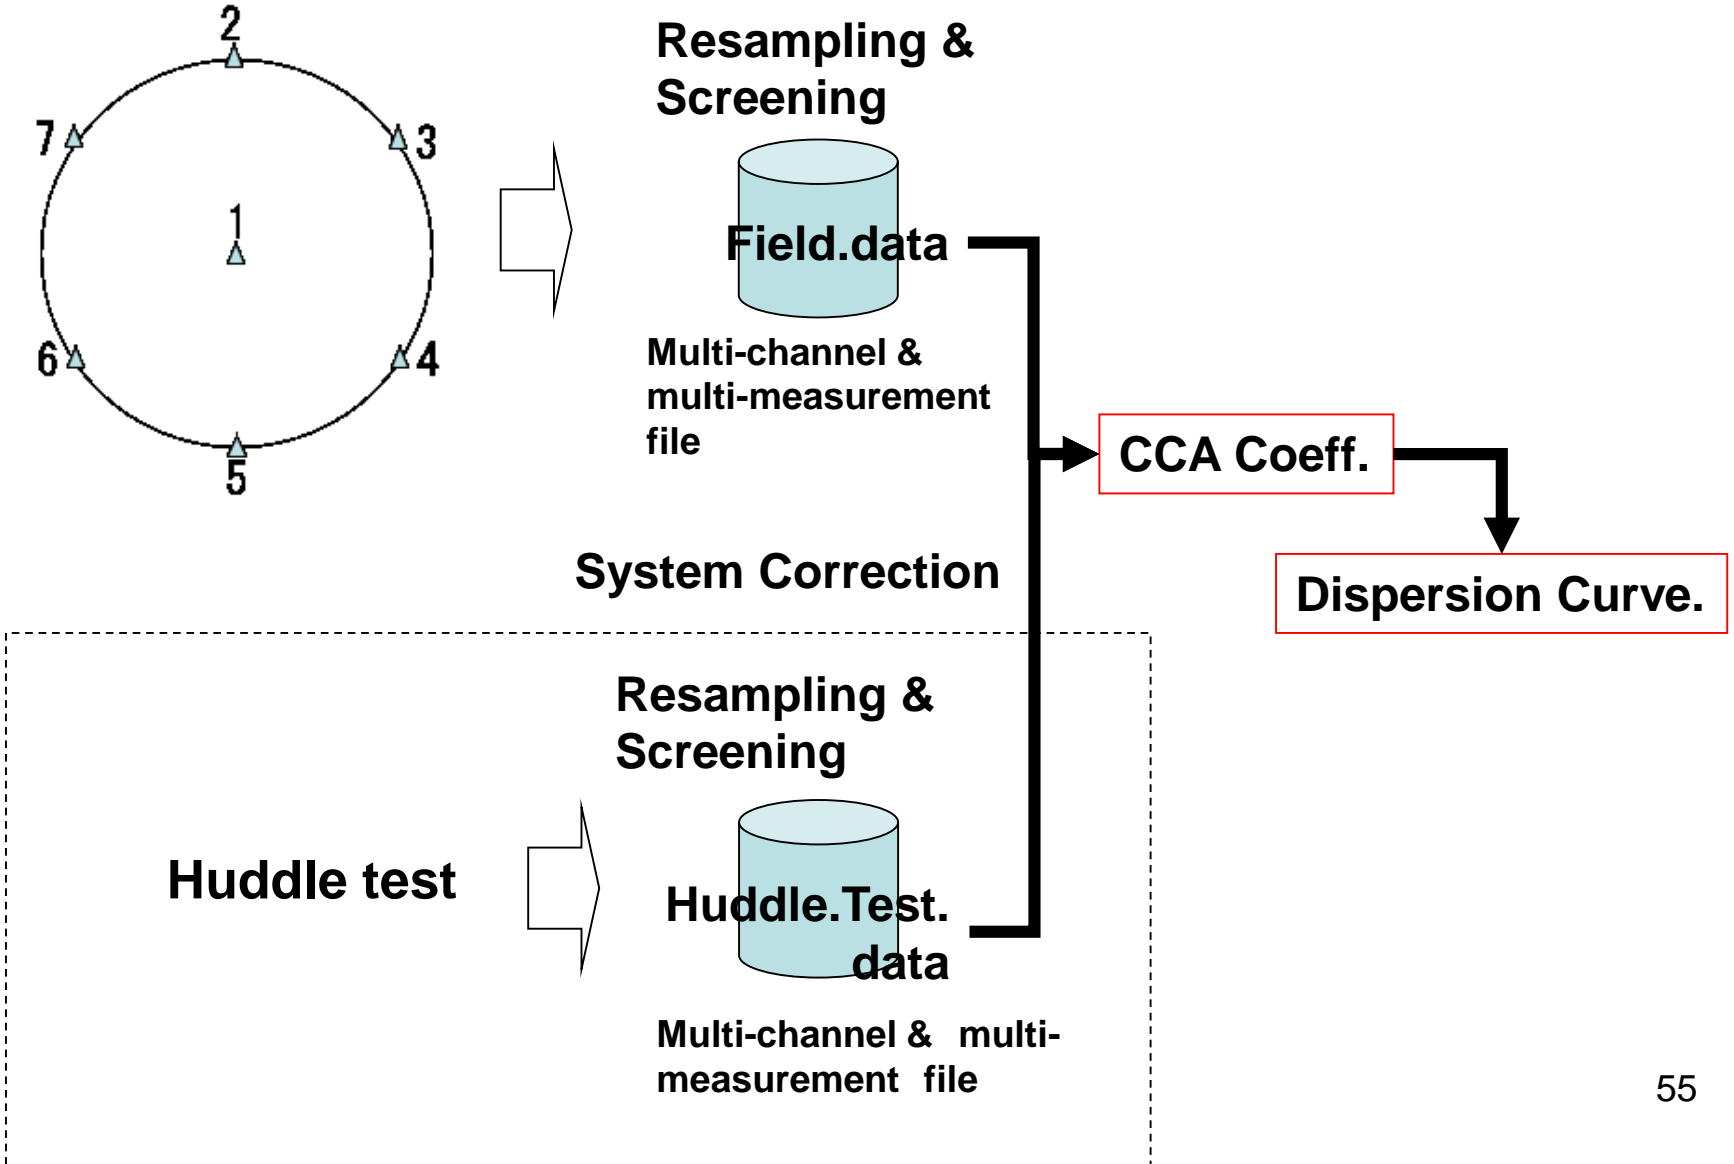

The seismometers used in field measurement are put close each other like a huddle and simultaneous recording is conducted.

System correction:

The difference of the characteristics among the recording system can be corrected using the data obtained by huddle tests.

Flow of the data processing for CCA

Field measurement

```
pwrcrs3.sh
```

```
#!/bin/sh
```

```
./bin/pwrcrs3.exe 2>&1 | tee cca_wkf/log/pwrcrs3.log
```

```
./bin/mk_title_post.exe
```

Example of pwrcrs3.prm:

```
1.0 25.0 0.016 0.25 1 .5 :fmin,fmax,dt,bw,n_huddle,smthf
HDLNN1.dat 1 1 :Huddle Test data File name(A12), n_coh,n_pow
F2LNN1.dat 1 1 :Field data File name(A12), n_coh,n_pow
0 1 :n_cor_center, n_mod
```

where

fmin, fmax : minimum and maximum frequencies for analysis

bw : band width of Parzen window

n_huddle : flag for system correction using huddle test data
(0:no, 1:yes)

smthf : smoothing parameter

n_coh,n_pow : coherence & power spectra output flag : (0:no output , 1:yes)

n_cor_center : flag for correction using sensor at the center.
(0:no output , 1:yes)

n_mod : =0 no , =1 yes for plotting wavelength/3 vs Vs

Example of Execution

```
yokoi@ubuntu:~/CCA2017/CCA2019$ sh pwrcrs3.sh
Program pwrcrs3.for
./cca_wkf/prm/pwrcrs3.prm
HDLNN1.dat ./cca_wkf/data/resampled_files/HDLNN1.dat
      1      1

CCA coefficient

calculated in the frequency domain

$$n_huddle=0$$

$$s_{CCA'}(r, \omega) \approx \frac{\sum_{m=1}^M \sum_{m'=1}^M E[C_{m,m'}(r, \omega)]}{\sum_{m=1}^M \sum_{m'=1}^M E[C_{m,m'}(r, \omega)] \exp\{-i(\theta_m - \theta_{m'})\}} \approx \frac{J_0^2(r\omega/c)}{J_1^2(r\omega/c)}$$

$$n_huddle=1$$

$$s_{CCA}(\omega) = \frac{\sum_{i=1}^M \sum_{k=1}^M R_{ik}(\omega)}{\sum_{i=1}^M \sum_{k=1}^M R_{ik}(\omega) \exp\{-j(\theta_i - \theta_k)\}}$$

$$R_{ik}(\omega) = \frac{C_{00}^{obs}(\omega) E[C_{ik}^{obs}(\omega)] \overline{Cor_{ik}^{huddle}(\omega)}}{\sqrt{E[C_{ii}^{obs}(\omega)] E[C_{kk}^{obs}(\omega)]}}$$

$$\overline{Cor_{ik}^{huddle}(f)} = \exp \left\{ jE \left[\text{Arg} \left(\frac{\sqrt{C_{ii}^{huddle}(f)} \cdot C_{kk}^{huddle}(f)}{C_{ik}^{huddle}(f)} \right) \right] \right\}$$

KR derived from CCA coefficient

$$s(r, \omega) = \frac{J_0^2(r\omega/c)}{J_1^2(r\omega/c)}$$

Long wavelength approximation
(Small value of kr) (Cho et al,2006)

$$c(\omega) = \frac{r\omega}{2} \sqrt{s(r, \omega) + 2}$$

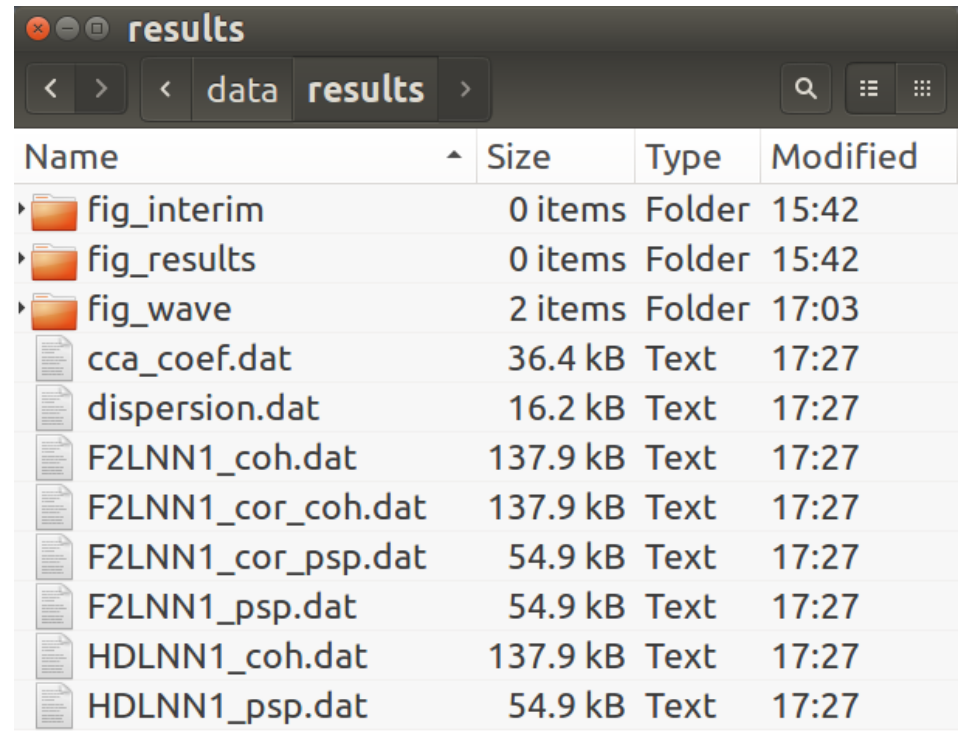

Improved approximation: Yokoi(2012)

$$c(\omega)/r\omega = 1.0003 \left(\frac{\sqrt{s(r, \omega) + 0.97221}}{2.0003} + 0.0015245 \right) - 0.0138$$

Estimate $c(\omega)$ using the relation $KR=2\pi R/c(\omega)$

Output Files

in ./ccawkf/data/results

Power & Fourier Spectra

(Velocity) Power Spectra

(Velocity) Fourier Spectra

Power spectra corrected using huddle test records are in “cca_coef.dat” and its example is shown few slide later.

In the shown example, seismometers of which natural frequency is 2Hz are used, then the power & Fourier spectra decays in the frequency range lower than that frequency.

These figures are stored in ./cca_wkf/data/results/fig_results in PostScript format.

Coherence

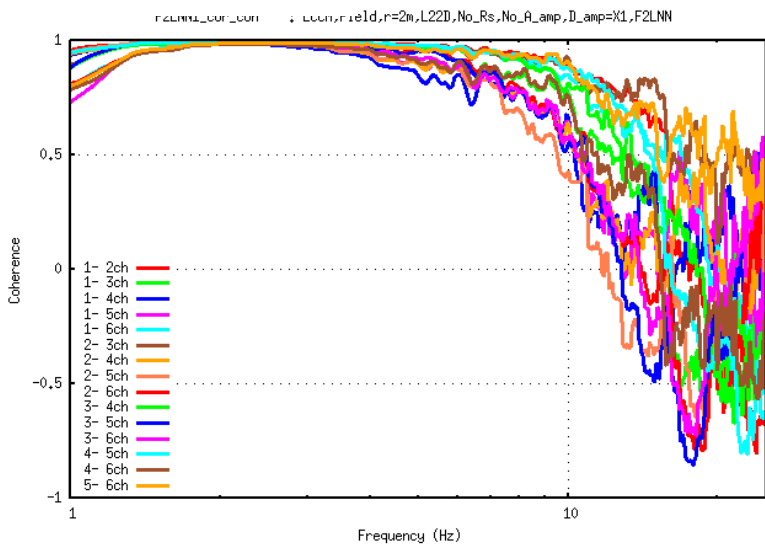

Field Data

Huddle Test Data

Corrected Data

14,5963, 1,13661

These figures are stored in
./cca_wkf/data/results/fig_results
in PostScript format.

cca_coef.dat

Power Spectra of ch1

G0/ALL & G1/ALL

CCA coefficient

Incoming Azimuth

These figures are stored in `./cca_wkf/data/results/fig_results` in PostScript format.

Quality Control

Using the values of “kr” in the file “dispersion.dat”, Z0/ALL and Z1/ALL in the file “cca_coef.dat” are compared with the theoretical $J_0(kr)^2$ and $J_1(kr)^2$, respectively. Arrows indicate the limit of the range of “kr” for analysis, where the observed curves run off from the theoretical ones.

(Example 1-5)

These figures are stored in `./cca_wkf/data/results/fig_results` in PostScript format.

dispersion.dat

Frequency	Velocity	Azimuth	KR
0.916	32.348	-208.786	0.356
0.977	39.342	-210.076	0.312
1.038	44.918	-210.351	0.290
1.099	52.573	-210.471	0.263
1.160	61.721	-210.378	0.236

...

This figure is stored in `./cca_wkf/data/results/fig_results` in PostScript format.

4. Heuristic Search of Vs Structure

Shell Script used:

sh inversion.sh

Programs and parameter file used:

./bin/disp_sma1_2.exe + disp_sma1_2.prm

```
inversion.sh:
```

```
#!/bin/sh
```

```
./bin/disp_sma1_2.exe | tee ./cca_wkf/log/inversion.log
```

```
./bin/inv_plt.exe | tee -a ./cca_wkf/log/inversion.log
```

```
gnuplot -e "load './cca_wkf/prm/gnuplt_script/inv.plt' ; pause -1 "
```

```
rm ./cca_wkf/data/results/temp*.dat
```

Optimum Velocity Structure
vel_cal.dat

Comparison of Cal. To Obs.
disp_cal.dat

disp_sma1_1.for Yokoi(2006)

Combination of the Down Hill Simplex Method (Nelder & Mead (1965)) and the Very Fast Simulated Annealing method (Ingber, 1989).

DHSM: Down Hill Simplex Method (Nelder & Mead (1965))

An efficient algorithm to find “local minimum”.

Faster than Geiger’s method. Partial derivatives are not necessary.

Result is controlled by given initial values and easily captured by local minimum.

Example of application to the microtremor array: Ohori et al(2002)

VFSA: Very Fast Simulated Annealing method (Ingber, 1989)

One of the heuristic search methods.

Analogy of cooling and crystallization process of metals.

Results can escape from local minimum and can get global minimum with some probability.

Time consuming due to the probabilistic search for each parameter.

Example of application to the microtremor array & appropriate values of parameters for this purpose: Yamanaka (2004)

Edit "dispersion.dat" using "gedit" or other text editor

(Example 1-6)

Then, redraw it using:
`sh ./vel_model_plt.sh`

Vel_model_plt.prm

```
Open  vel_model_plt.prm  Save  -0.923119, -35.5541

dispersion.dat :File name for the observed dispersion relation (a25).
vel_cal.dat :File name for the estimated velocity structure (a25)
disp_cal.dat :File name for the calculated dispersion relation (a25)
```

(Example 1-6)

Explanation

Control parameter for the simulated annealing method

idum :Random seed (integer)

As the result may depend on the initial velocity model given by random number, it is strongly recommended for users to apply this program several times with various values of random seed and to grasp the scatter of result.

t0 :Initial Temperature

a,c :Coefficients for $T=T_0 \cdot \exp(-c \cdot k^a)$, where k is iteration number

ntemp :Maximum number of temperature change

j0 :Number of iteration for each temperature

threshold for conversion

eps0 : acceptable misfit.

Search Range file: str_range.dat

LCCM, r=2m, L22D, F2LNN0, 12/03/15:Model(a30)

```

Example 1-2: For Huddle Test Data:

Copy the Huddle Test data file "HDLNN001.sg2" into "./cca_wkf/data/sg2_files".

sg2file.lst is overwritten in the next slide

Edit the parameter file "seg2read.prm" in "./cca_wkf/prm".

(seg2read.prm)

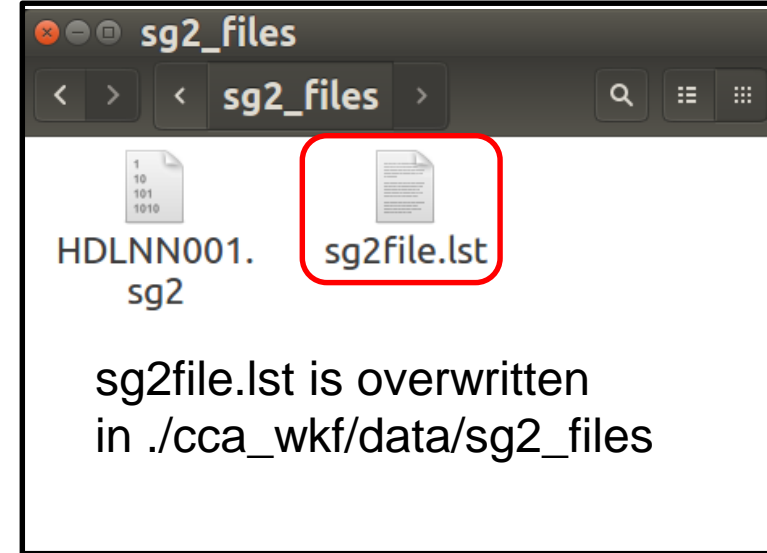

```
LCCM,Huddle,r=0m,L22D,No_Rs,No_A_amp,D_amp=X1,HDLNN0,Mar.15,2012      :comm(a70)
5.E-3      : scaling factor (for output files in mkine(1.e-3cm/s))
sg2        : extension of input seg2 format files(a3)
cdm        : extension of output ascii text files(a3)
0 3 0.1 1.0 1.5 :nfilter(=1:apply),nchara=3:bandpass),f1,fh,fs
pvlist 1 2 3 4 5 6 : Channel Pivoting
```

Example 1-2(cont): Execution

```
yokoi@ubuntu: ~/CCA2017/CCA2019
yokoi@ubuntu:~/CCA2017/CCA2019$ sh seg2read.sh
./cca_wkf/prm/seg2read.prm
./cca_wkf/data/sg2_files/sg2file.lst
HDLNN001.sg2

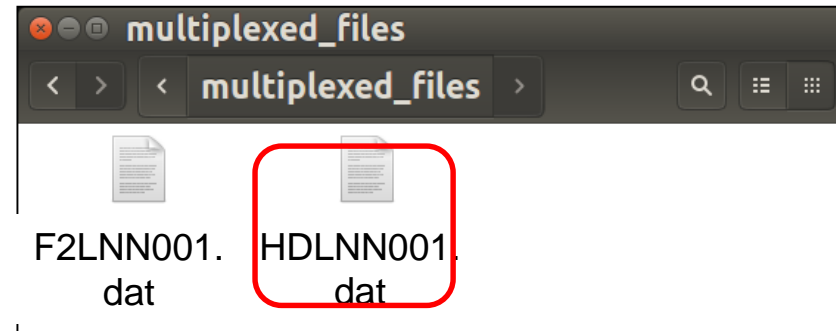

./cca_wkf/data/sg2_files/HDLNN001.sg2
./cca_wkf/data/multiplexed_files/HDLNN001.cdm
nch= 12 dt= 0.008 nn= 37500
    1 files have been converted.
Normal End.
yokoi@ubuntu:~/CCA2017/CCA2019$
```

Input file is ./cca_wkf/data/sg2_files/HDLNN001.sg2

Multiplexed output is ./cca_wkf/data/multiplexed_files/HDLNN001.cdm

Log file is stored in 'cca_wkf/log/seg2read.log'

Power & Fourier Spectra

(Example 1-6)

(Velocity) Power Spectra

(Velocity) Fourier Spectra

Power spectra corrected using huddle test records are in “cca_coef.dat” and its example is shown few slide later.

In the shown example, seismometers of which natural frequency is 2Hz are used, then the power & Fourier spectra decays in the frequency range lower than that frequency.

These figures are stored in ./cca_wkf/data/results/fig_results in PostScript format.

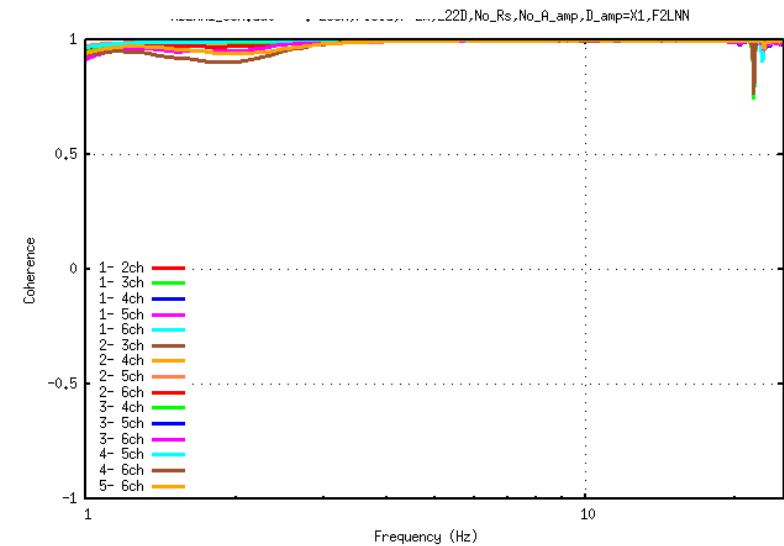

Coherence

(Example 1-7)

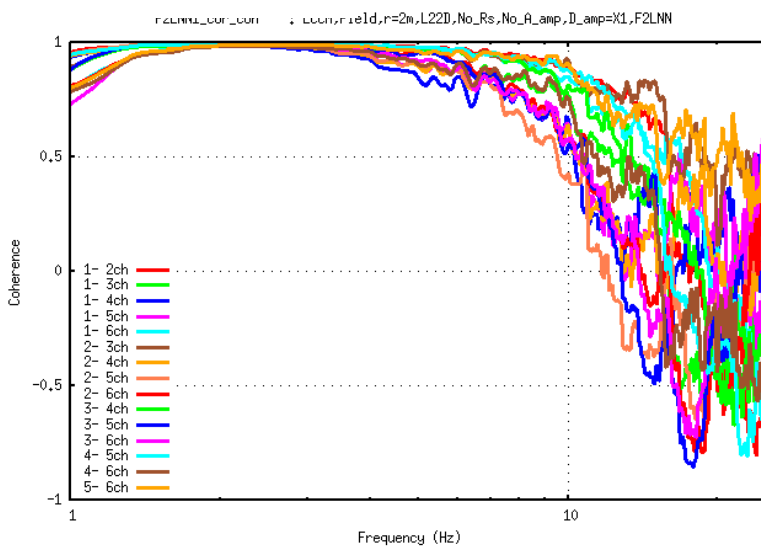

Field Data

Huddle Test Data

Corrected Data

14,5963, 1,13661

These figures are stored in
./cca_wkf/data/results/fig_results
in PostScript format.

5,35681, 1,19574

(Example 1-5)

```
yokoi@ubuntu:~/CCA2017/CCA2019$ sh results.sh

cca_coef.dat

Power Spectra of ch1

G0/ALL & G1/ALL

CCA coefficient

Incoming Azimuth

These figures are stored in `./cca_wkf/data/results/fig_results` in PostScript format.

Quality Control

Using the values of “kr” in the file “dispersion.dat”, Z0/ALL and Z1/ALL in the file “cca_coef.dat” are compared with the theoretical $J_0(kr)^2$ and $J_1(kr)^2$, respectively. Arrows indicate the limit of the range of “kr” for analysis, where the observed curves run off from the theoretical ones.

(Example 1-5)

These figures are stored in `./cca_wkf/data/results/fig_results` in PostScript format.

dispersion.dat

(Example 1-5)

Frequency	Velocity	Azimuth	KR
0.916	32.348	-208.786	0.356
0.977	39.342	-210.076	0.312
1.038	44.918	-210.351	0.290
1.099	52.573	-210.471	0.263
1.160	61.721	-210.378	0.236

...

This figure is stored in `./cca_wkf/data/results/fig_results` in PostScript format.

Edit "dispersion.dat" using "gedit" or other text editor

(Example 1-6)

Then, redraw it using:
`sh ./vel_model_plt.sh`

Vel_model_plt.prm

```

+-----+
+                                     +
+                               Disp_sma1                               +
+                                     +
+ Program to obtain the optimum underground velocity +
+ structure for the given dispersion relation of +
+ Rayleigh wave. +
+                                     +
+ The used method is a combination of the down hill +
+ simplex method (Nelder & Mead (1965)) and the +
+ very fast simulated annealing method (Ingber +
+ (1989)). +
+                                     +
+ The subroutine DSPRAY and DSPMRX published in +
+ "Seismological Algorithm" are used directly. +
+ AMOEBA and AMOTRY published in "Numerical Recipe" +
+ are also used, but with significant modification +
+ for the adaptation with the very fast simulated +
+ annealing method. +
+                                     +
+ By the combination with the down hill simplex +
+ method, the very fast simulated annealing method +
+ is gotten much faster. +
+                                     +
+                                     July 6, 2005+

Plotting (Example 1-6 cont).

The same figures are stored in Post Script files:

`./cca_wkf/data/results/fig_results/
disp_cal.ps`

`./cca_wkf/data/results/fig_results/
vs_structure.ps`

Green points can be eliminated
by setting `n_mod=0` in
`pwrhrs3.prm`.

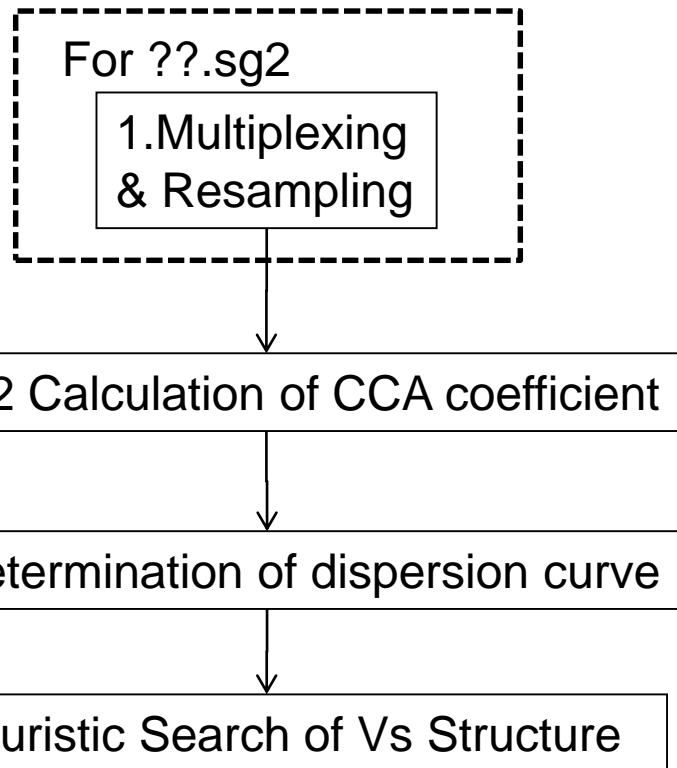

Example2

(Sensor at Center without Instrumental Correction)

Example with two data sets:

7 points circular array, one of which is at the center

Both are the seg2 standard format file.

The array used in the field has 7 sensors and 7-th sensor (CH-7) at the center. Other 6 sensors were installed clockwise order. Then, `pvlist 7 6 5 4 3 2 1 :`

seg2read.sh: Execution

+ very fast simulated annealing method (Ingber     +
+ (1989)).                                          +
+                               +
+ The subroutine DSPRAY and DSPMRX published in     +
+ "Seismological Algorithm" are used directly.      +
+ AMOEBa and AMOTRY published in "Numerical Recipe" +
+ are also used, but with significant modification +
+ for the adaptation with the very fast simulated  +
+ annealing method.                               +
+                               +
+ By the combination with the down hill simplex    +
+ method, the very fast simulated annealing method +
+ is gotten much faster.                           +
+                               +
+                               +
+                               July 6, 2005+
