*EQTAP: Development of Earthquake and Tsunami Disaster Mitigation
Technologies and Their Integration for the Asia-Pacific Region sponsored by
Ministry of Education, Culture, Sports, Science and Technology

¹: Building Research Institute (BRI), Independent Administrative Institution

²: National Institute for Land and Infrastructure Management (NILIM),
Ministry of Land, Infrastructure and Transport

Note: The members of the Building Research Institute (BRI) have
participated the EQTAP project and have had charge of the "Survey Method of
Earthquake Disaster Related with Buildings and Houses "from April 1998
through March 2002. This guideline is the final product of their research
activities.

A Table of Contents

1. Introduction	1
1.1. Objectives	1
1.1.1. Guideline for the survey methods	1
1.1.2. Data and materials on that the guideline is based	1
1.2. Guideline for the Survey Methods	3
2. Earthquake and Ground Motion	5
2.1. Consideration on the interface of seismological topics to building damages	5
2.2. Earthquake Source	10
2.2.1. Hypocenter location and magnitude	10
2.2.2. Focal mechanism	14
2.2.3. Crustal deformation	19
2.2.4. Rupture process	25
2.3. Propagation Path	28
2.3.1. Crust	28
2.3.2. Deep sediment	33
2.4. Seismic Motion	38
2.4.1. Intensity	38
2.4.2. Estimation of devastating ground motion	58
2.4.3. Site effect	62
3. Earthquake Engineering	67
3.1. Evaluation of Ground Damage	67
3.1.1. Damage investigation flow chart	68
3.1.2. Quick inspection	70
3.1.3. Damage classification	70
3.2. Evaluation on Building Damage	85
3.2.1. First announcement of building damage	86
3.2.2. Quick inspection of damaged buildings	87
3.2.3. Damage classification	139
3.2.4. Damage survey in a typical area	193
3.2.5. Damage overview in damaged areas	195
3.3. Evaluation of Building Foundation Damage	198
3.3.1. Damage investigation flow chart	199
3.3.2. Investigation method	205

*Reference lists are attached to each section.
