## Latin American Earthquake Engineering Course for Group of Building Engineers closed

*By Mr. Yoshihiro Iitake, Head of Administration Division, IISEE*

Using their knowledge which they had learned in IISEE, ten participants of building engineers had presentation each about problems to solve in their country that they can work on the plan in the half year through a year for two days from 11 July.

This presentation was the last event in this course in Tsukuba.

From July 16, they had lectures and experiments in El Salvador, and on July 27, the training of the group of Building engineers had closed.

Including participants in this course, we had 81 people from 10 countries in the total of the Latin American Earthquake Engineering course.

We hope to come into wide use of the earthquake resistant buildings become more accelerated in Latin American countries by efforts of ex-participants of IISEE.
